The European Commission and the World Tourism Organization (UNWTO) have a long standing history of cooperation in the field of tourism. This relationship was enhanced with the signature of a Memorandum of Understanding between both organizations in May 2012 and with the April 2016 agreement between UNWTO and the Directorate-General for Internal Market, Industry, Entrepreneurship and SMEs (DG GROW) of the European Commission for the development of the *Enhancing the Understanding of European Tourism* project.

One of the strategic areas covered by this project is the assessment of tourism market trends. The *European Union Tourism Trends* report developed under this area places European Union tourism in the context of global tourism trends.

The results presented in the report reflect the continued growth of international tourism in recent years. International tourist arrivals (overnight visitors) reached 1,239 million worldwide in 2016, generating euro 1,107 billion in receipts in destinations. Tourism today accounts for 10% of global Gross Domestic Product (GDP), 7% of world exports and one in ten jobs worldwide.

With a rich cultural heritage and diversity, and comprising some of the largest destinations and main source markets in the world, Europe continues to stand as the mostvisited region, welcoming half of the world's international tourist arrivals. Within Europe, the 28 countries of the European Union account for the bulk of the region's international arrivals, some 81% of Europe's total and 40% of the world's figure.

Sustained growth in tourism has been instrumental in supporting the economic recovery of many European countries, largely contributing to job creation, GDP and the balance of payments. Today, tourism is one of the key pillars of the EU strategy for jobs and inclusive growth.

We trust this report provides a useful and comprehensive overview of tourism in the European Union and that it enhances the knowledge base of the EU Virtual Tourism Observatory, helping to shape evidence-based policies for the development of future initiatives in tourism in the European Union to the benefit of all its people.

Photo: Velnezers, Latvia, author: Valdis Skudre, courtesy of Latvia Travel.

Tourism is important for many countries and regions. As well as creating jobs, tourism helps develop bonds between societies.

In the European Union, tourism contributes 10% to EU GDP and creates jobs for 26 million people – through its direct, indirect and induced effects in the economy – in particular for young people, women and people from a migrant background.

Europe is maintaining its leadership in the global tourism market. Recent events have not prevented tourism from maintaining its position and becoming one of the fastestgrowing sectors in the European economy, thereby demonstrating its remarkable resilience and flexibility.

2017 has been an extraordinary year for tourism in the EU, with an 8% growth compared to 2016, exceeding the worldwide average. Member States together reported 538 million international tourist arrivals last year, accounting for 40% of the world's total. This is the eighth consecutive year of sustained growth for tourism in the EU.

Tourism is a diverse sector with multiple needs; it requires targeted support at all levels to remain competitive in the face of increased competition from destinations outside the EU. Boosting investment, supporting SMEs, exploiting the opportunities of the digital economy and collaborative economy, and equipping tourism professionals with the right skills are only some of the areas that we focus on within the EU. Understanding the potential of European tourism – along with its challenges and trends – is indispensable in shaping appropriate and forward-looking policies in a continuously changing environment.

But effective policies can only rely on sound evidence. And that is why this report is so timely. It provides a broad range of information on the current state of affairs and a look into the future by placing the EU within the global context. It will help those promoting tourism destinations or developing market strategies to find the insight they need.

This information will help enhance knowledge about the European and global tourism markets and will be a useful tool for policy makers.

The *European Union Tourism Trends* publication is part of Enhancing the Understanding of European Tourism, a joint project by UNWTO and the Directorate-General for Internal Market, Industry, Entrepreneurship and SMEs of the European Commission (DG GROW).

The project aims to improve the socio-economic knowledge of the tourism sector, enhance the understanding of European tourism and contribute towards economic growth, job creation, thus improving the competitiveness of the sector in Europe.

The project covers four strategic areas: 1) increased cooperation and capacity building in tourism statistics; 2) assessment of tourism market trends; 3) promotion of cultural tourism through the Western Silk Road; and 4) promoting sustainable, responsible, accessible and ethical tourism and aims at improving the socio-economic knowledge of tourism, enhancing the understanding of European tourism and contributing to economic growth, job creation and the competitiveness of the sector in Europe.

This publication is a research project of the Statistics, Trends and Policy Programme of the World Tourism Organization (UNWTO). The work was carried out under the supervision of programme Director John Kester. Camino Rojo coordinated the research, drafting and editing work. Fernando Alonso, Hee-Jin Cho, Michel Julian and Javier Ruescas contributed at different stages with drafting and revision and Benedick Gibson with proofreading work. UNWTO wishes to acknowledge the support of Unit F4 - Tourism, Emerging and Creative Industries of DG GROW and expresses its appreciation to the following peer reviewers who have contributed with their expertise: Sérgio Guerreiro from Turismo de Portugal, Jennifer Iduh from the European Travel Commission (ETC), Angelika Liedler and Julia Mauk from Austria's Federal Ministry of Science, Research and Economy, Peter Nash from Tourism Ireland and Markéta Vogelová from CzechTourism.

The European Union (EU) is an economic and political union comprising 28 member countries with a combined population of 509 million people as of 2016. The economy of the EU is the second largest in the world with a Gross Domestic Product of euro 15 trillion and a GDP per capita of euro 29,200.

C. Star of States St. 1998

Within the EU, Southern and Mediterranean Europe is the most visited group of countries with 193 million arrivals in 2016, followed by Western Europe (171 million), Northern Europe (66 million) and Central and Eastern Europe (70 million). Five out of the top ten destinations in the world are located in the European Union: France, Spain, Italy, Germany and the United Kingdom.

Six out of ten EU residents made one or more trips in 2015. In total they made 1.2 billion trips and spent 6.0 billion nights, with 58% of trips to, and 75% of nights in, destinations in their own country.

EU destinations received 139 million arrivals from outside the Union, of which 56 million from European source markets outside the EU. They received 83 million arrivals from outside Europe, of which 39 million from the Americas, 33 million from Asia and the Pacific, 6 million from Africa and 5 million from the Middle East.

Tourism generates 10% of GDP and represents 9% of total employment in the European Union. International tourism accounts for 6% of EU overall exports and 22% of services exports. Tourism ranks fourth as an export category, after chemicals, automotive products and food. The EU welcomed 500 million international tourist arrivals (overnight visitors) in 2016, accounting for 40% of the world's total. International tourism receipts reached euro 342 billion, representing 31% of worldwide tourism earnings.

Europe is the world's largest source region for outbound tourism, generating an estimated 618 million arrivals, half of the world's total, in destinations worldwide in 2016. Four out of the top ten source markets in the world are located in the European Union: Germany, the United Kingdom, France and Italy.

EU destinations counted 608 thousand accommodation establishments in 2016 with a total capacity of 31 million bed-places, 44% of which were in hotels. Around 1 billion guests spent 3.1 billion nights in EU accommodation establishments.

Guests from Extra-EU source markets spent 137 million nights in EU accommodation establishments in 2016, and guests from interregional source markets, 276 million. The United States is the top source market outside the EU with 74 million nights, followed by Switzerland (44 million nights), the Russian Federation (32 million nights) and China (25 million nights).

UNWTO's long-term outlook *Tourism Towards 2030* shows that there is still a substantial potential for further tourism growth in the EU in the coming decades. International arrivals to EU destinations are expected to increase by an average of 9 million a year through 2030 (+1.9% a year), with faster growth from source markets outside the EU.

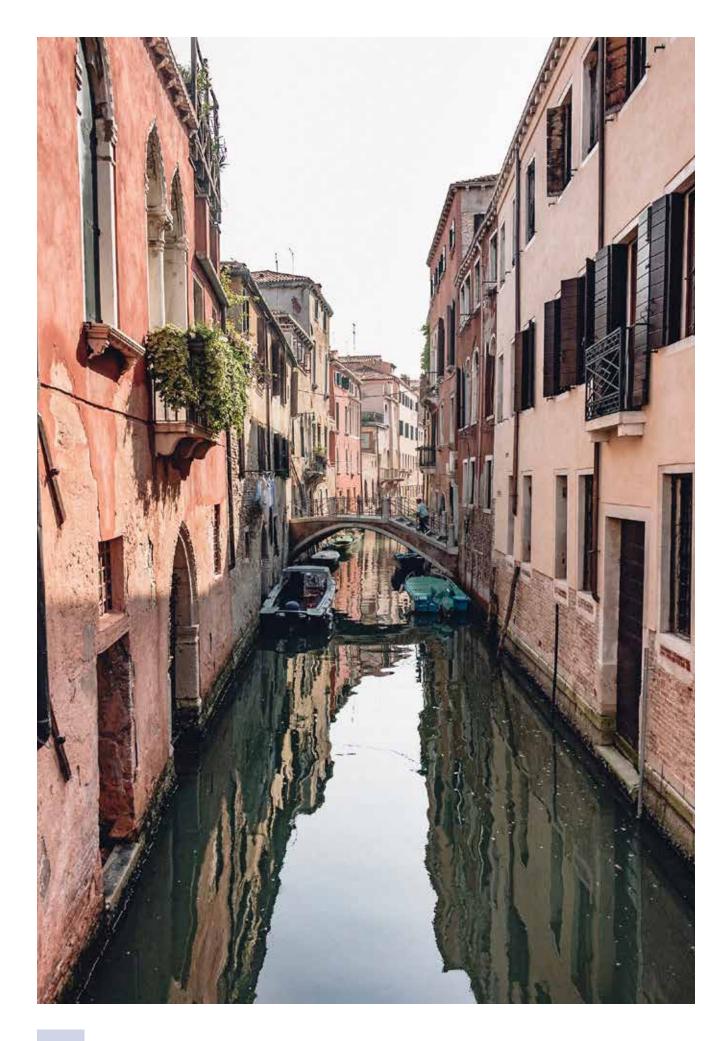

### The European Union in the World

40% International tourist arrivals **31%** International tourism receipts

The European Union (EU) is an economic and political union comprising 28 member countries around the common goals and values of human dignity, freedom, democracy, equality, rule of law and human rights. The main economic engine of the EU is the single market, with rules that apply in all member states enabling the free movement of people, goods, services, and capital.<sup>1</sup>

This chapter analyses the main social and economic indicators of the European Union based upon data from Eurostat, the statistical office of the European Union, and the International Monetary Fund (IMF).

#### The 28 European Union member states

The European Union is a unique economic and political union with the majority of European countries as member states. Its predecessor was created in the aftermath of the Second World War with the prime objective to foster economic cooperation – the idea being that countries that trade with one another become economically interdependent and so more likely to avoid conflict.

The resulting European Economic Community (EEC) was formed in 1958 initially increasing economic cooperation between six countries: Belgium, Germany, France, Italy, Luxembourg and the Netherlands. Since then, 22 other members have joined over the years and a large single market (also known as the 'internal' market) has been created. From a purely economic union this has evolved into an organisation spanning common policy areas from climate, environment and health to external relations, security, justice and migration. The change of name to the European Union (EU) in 1993 reflected this evolution.

The current 28 EU countries together cover much of the European continent. Categorised by UNWTO subregions, five member states are located in Northern Europe, six in Western Europe, nine in Central and Eastern Europe, and eight in Southern and Mediterranean Europe (table 1.1). In this report, the European Union or EU, refers to the 28 member countries, unless otherwise indicated. The remaining 26 countries located within the UNWTO region of Europe but outside the European Union are referred to as extra-EU.

# Free movement for more than 400 million EU citizens in the Schengen Area

22 of the 28 European Union member states and four associated extra-EU countries comprise the **Schengen Area** (table 1.1), named after the Schengen Agreement signed in 1985. The Schengen provisions abolish checks at the area's internal borders while tightening controls at the external borders, in accordance with a single set of rules with regard to conditions of entry and the types of visa needed. The border-free Schengen Area guarantees free movement to more than 400 million EU citizens, as well as many non-EU nationals legally residing on EU territory.<sup>2</sup> Visitors from outside the EU can also move freely after having entered one of the area's countries

on a single visa or with a visa exemption. The Schengen provisions have enabled the further growth of tourism in Europe significantly.

# The 28 EU countries account for 7% of the world's population and 3% of the surface area

European Union countries were home to a combined population of 509 million people in 2016, accounting for 7% of the world's total (table 1.2). As a whole, the EU territory is the third most populated in the world, after China (1.4 billion) and India (1.3 billion) and ahead of the United States (323 million).

EU member states occupy a relatively small geographic area of 4.4 million square kilometres, or 3% of the world's surface area. Combined with a comparatively large population this translated into a population density of 116 inhabitants per square kilometre (km<sup>2</sup>) in 2015, more than twice the world average of 55.

The country with the most numerous population in the European Union is Germany with 82 million inhabitants (16% of the EU total population), followed by the United Kingdom (66 million or 13%) and France (65 million or 13%, i.e. European France, excluding overseas territories). By surface area, France (European France) is the biggest country with 549,000 km<sup>2</sup>, followed by Spain (506,000 km<sup>2</sup>) and Sweden (447,000 km<sup>2</sup>). Malta is the country with both the smallest population (434,000 inhabitants or 0.1%) and surface area (320 km<sup>2</sup>), but has the highest population density with 1,341 inhabitants per km<sup>2</sup>. Finland is the country with the lowest density (16 inhabitants per km<sup>2</sup>).

The European Union population is comparatively mature and ageing, with a median age over 40. The population is still expected to grow to 523 million by 2060, corresponding to growth at an average rate of 0.1% a year in this 45-year period, a comparatively slower pace than in 1960-2015 (+0.4% a year)<sup>3</sup>.

# The European Union constitutes the second largest economy in the world

With a combined Gross Domestic Product (GDP) of euro 14,900 billion in 2016, the EU economy is the second largest in the world, accounting for 22% of the world's economic output (table 1.2).

By groups of EU countries, those in Western Europe account for the largest share of EU GDP (46%), followed by EU countries in Northern Europe (24%), in Southern and Mediterranean Europe (22%) and in Central and Eastern Europe (7%).

There are substantial differences among countries, with population and GDP varying widely. The largest share of the EU's GDP is generated by Germany (euro 3,144 billion or 21% of the EU total), the United Kingdom (euro 2,396 billion or 16%), France (euro 2,229 billion or 15%), Italy (euro 1,681 billion or 11%) and Spain (euro 1,119 billion or 8%). At the other end of the spectrum, Estonia, Cyprus and Malta (0.1% each) account for the smallest shares of the EU economy.

Overall, the income level in the European Union is one of the highest in the world, with an average GDP per capita of euro 29,200 in 2016<sup>4</sup>.

Out of the 28 countries that belong to the European Union, 23 are categorised by the International Monetary Fund (IMF) as advanced diversified economies (table 1.1). The remaining five EU members (Bulgaria, Croatia, Hungary, Poland and Romania) are categorised as emerging market and developing economies.

UNDP's Human Development Index (HDI)<sup>5</sup> classifies all EU member states among the 60 countries with the highest human development in the world, ranging from the 4<sup>th</sup> position held by Germany to the 56<sup>th</sup> occupied by Bulgaria. This classification reflects comparatively higher living standards for EU countries, as measured through life expectancy, education and per capita income.

#### Growth has picked up in the EU economy

After a period of continued economic growth between 1994 and 2008, the European Union was hit by the global financial and economic crisis in 2009, which resulted in an economic recession for most EU economies and led to an overall decrease of 4.3% in GDP<sup>6</sup>. The Union's economy rebounded in 2010 and growth rates remained positive throughout 2011, but the economy again contracted in 2012 (-0.4%). Since then, EU countries have grown at a weak pace, with relatively slow growth marked by uneven growth rates over time and among member states.

Overall, the economic output of the 28 countries of the European Union expanded by 2.0% in 2016 and growth picked up to 2.4% in 2017, the fastest growth rate since pre-crisis year 2007 (+3%). Growth was fuelled by an

increase in domestic spending, driven by an improving labour market, a less-tight fiscal stance and a loose monetary policy.

# The EU labour market is gradually recovering from the 2009 crisis

The financial and economic crisis of 2009 also had a negative impact on the EU labour market, with overall unemployment rates rising from 7% in 2008 to 11% in 2013. The implementation of structural reforms since 2010 has also underpinned the readjustment of the labour market, with overall unemployment rates receding towards 8.5% in 2016, slightly above the pre-crisis low of 7.0% in 2008 but far from the 2013 peak of 10.9%<sup>7</sup>.

While unemployment rates in countries such as Germany (4.1%) or the United Kingdom (4.8%) have returned to 2008's pre-crisis or even lower levels, other EU member states are still struggling with high unemployment rates.

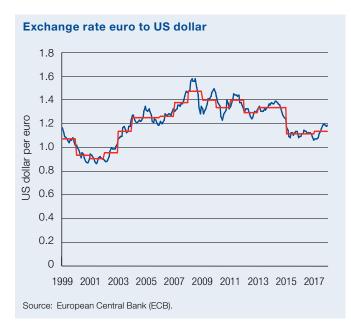

Although the 2009 financial and economic crisis limited possibilities for some EU residents to travel, demand overall still held up rather well as will be seen in the next chapters. In fact, as a major economic engine and employment generator in the EU, tourism has significantly contributed to crisis recovery.

# More than 340 million EU citizens in 19 countries share the euro

A single European currency, the euro, was established in 1999 and came into circulation in 2002. Currently more than 340 million EU citizens in 19 countries, the **euro area**, have adopted it as their common currency (table 1.1).<sup>8</sup> The euro is the second largest reserve and trade currency in the world, after the US dollar.

At the time of its adoption in January 2002, the euro stood at a relative low reference rate of US dollar 0.90 per euro. From 2002 onwards, the euro steadily appreciated against the US dollar and reached its highest value of US dollar 1.60 per euro in July 2008<sup>9</sup>. The instability of global financial markets in the period 2008-2014 resulted in a swinging pattern of ups and downs, though the euro remained comparatively strong throughout those years. In both 2013 and 2014 the euro's average exchange rate was US dollar 1.33 per euro.

In 2015, the US dollar appreciated against virtually all world currencies, particularly those of commodityexporting economies, supported by a loose monetary policy and the gradual recovery of the US financial market. The dollar appreciated by 16% against the euro, with the euro's value moving down to US dollar 1.11 per euro. In 2016 the US dollar and the euro maintained this same average exchange rate, but both appreciated against other currencies, most notably the British pound. Exchange rate variations in destinations and their source markets can influence world tourism flows. A destination becomes more price-competitive when its currency depreciates relative to the currencies of its source markets. Similarly, it becomes less affordable when its currency appreciates against the currency of its visitors. Although these fluctuations do not tend to alter tourism volumes overall, they can affect the direction of tourism flows. The impact is nonetheless rather contained in comparison to the effects of factors such as the cost of living at the destination, the cost of transport or safety.

Over the past decades, tourism has become a key driver of socio-economic progress through the generation of jobs, export income and infrastructure development for many destinations around the world. Since the end of World War II, international tourist arrivals (overnight visitors) worldwide have experienced continued growth, reaching 1,239 million in 2016, compared to 25 million arrivals in 1950. These arrivals generated euro 1,108 billion in international tourism receipts in 2016.

This chapter presents an analysis of international tourism on an aggregate level for the world and by UNWTO regions, including Europe, with the EU and the extra-EU groups of countries identified separately. For this two key indicators will be used: international tourist arrivals (overnight visitors) and international tourism receipts, as compiled by UNWTO from data reported by destinations around the world.

## Seven consecutive years of sustained worldwide growth in arrivals

Overall global demand for international tourism remained robust in 2016 despite challenges, though at a slightly more moderate pace than in previous years. While many destinations reported sound results and shared in the overall growth, others struggled with the impact of negative incidents either in their country or region, as safety and security represented a concern for a number of destinations. Some 46 million more tourists travelled internationally in 2016 compared to the previous year, an increase of 4% to total 1,107 million (table 2.1).

International arrivals have grown at a pace of 4% a year or higher for seven consecutive years following the 2009 global economic crisis. In 2012, international tourist arrivals in a year exceeded the 1 billion mark for the first time. In 2016, this number exceeded 1.2 billion and 305 million more international tourist arrivals were received compared to the 930 million of pre-crisis year 2008.

Growth in tourism receipts followed growth in international tourist arrivals, though at a slightly more moderate pace of 3% measured in real terms (i.e. taking into account exchange rate fluctuations and inflation, see box on page 19) (table 2.2). In absolute terms, earnings at destinations are estimated to have totalled euro 1,107 billion globally (US\$ 1,225 billion) in 2016.

By UNWTO region, Europe accounts for the largest share of international tourist arrivals, with 619 million arrivals recorded in 2016 or 50% of the world's total. This represents a 2% increase from 2015, with rather mixed results at the destination level. Asia and the Pacific is the second largest region, with 306 million international arrivals recorded in 2016 or 25% of the world's total. Asia enjoyed the fastest growth of all world regions in 2016, with an 8% increase in arrivals. The Americas accounts for 16% of the world's international tourists, with 201 million arrivals reported in 2016, up 4% from 2015. Africa recorded 58 million arrivals in 2016 (5% of the world's total) after a strong 8% increase, and the Middle East 56 million (4%) after a 2% decline.

Europe is also the largest region in terms of international tourism receipts, with euro 406 billion earned in 2016 or 37% of the world's receipts at destinations. This represents a 1% increase from 2015 in real terms (i.e. accounting for exchange rate fluctuations and inflation). Asia and the Pacific recorded euro 335 billion in tourism earnings (30% of world receipts), up 4% in real terms from 2015. International receipts in the Americas reached euro 283 billion (26% of global receipts), following a 3% increase. The Middle East earned euro 52 billion in 2016 (5% of the world figure), a 2% decrease in real terms, while Africa recorded euro 30 billion (3% of global receipts), up 8% from 2015, the largest increase of all world regions.

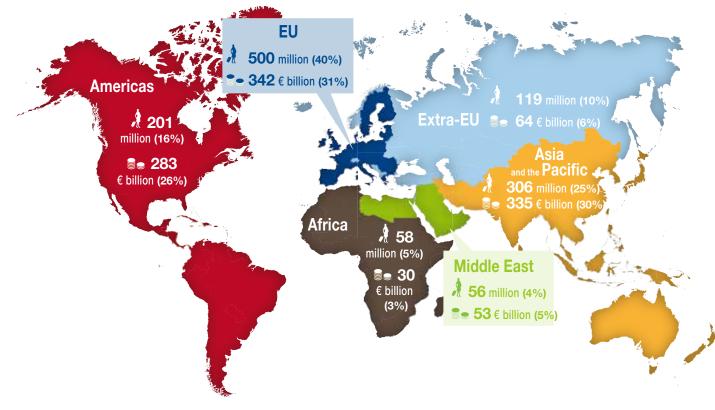

# European destinations attract half of the world's tourist arrivals

Europe at large (both EU and extra-EU) remains the most visited region in the world, accounting for 50% of the world's tourist arrivals and 37% of global tourism receipts, and continues to lead growth in absolute terms. With a rich cultural heritage and a favourable sociopolitical environment, and comprising many large source markets, Europe boasts twice the arrivals of the second most visited region in the world, Asia and the Pacific. However, as other destinations in less mature regions in the world, especially Asia and the Pacific, are growing at a faster pace, the share of Europe in the world has been decreasing gradually over time (from 58% of worldwide international arrivals in 1995 to 50% in 2016).

In 2016, Europe showed rather mixed results across destinations, with double-digit growth in some destina-

# **International Tourism 2016**

World international tourist arrivals (ITA): 1,239 million Wold international tourism receipts (ITR): Euro 1,107 billion

Source: World Tourism Organization (UNWTO).

tions offset by decreases in others, predominantly due to security concerns. Key European destinations including France, Belgium, the United Kingdom, Germany and Turkey faced some volatility and setbacks due to various terrorist attacks or, in the case of the UK, the vote to leave the European Union (Brexit). Yet, European destinations welcomed 15 million more tourists in 2016 (+2%), reaching a total of 619 million. This reveals the extraordinary resilience of the tourism sector and the strong prominence of European destinations.

European destinations earned euro 406 billion in tourism receipts in 2016, a modest 1% increase in real terms compared to 2015, due to mixed results at the destination level.

By subregion, **Southern and Mediterranean Europe** welcomed 6 million more tourists than in 2015, leading growth in arrivals (+2%). Receipts earned by the subregion remained flat (+0%) at euro 158 billion. **Central and Eastern Europe** also recorded a 4% increase in arrivals (127 million) and a 6% increase in receipts (euro 48 billion). In **Northern Europe** arrivals grew by 6% to 74 million and receipts by 6% to 69 billion, while **Western Europe** recorded flat growth in both arrivals (181 million) and receipts (131 billion).

## EU destinations record robust growth of 4% in arrivals and 3% in tourism earnings in 2016

Within Europe, the **28 countries of the European Union (EU)** welcome the bulk of international arrivals in Europe. The EU accounts for 40% of international tourist arrivals and 31% of international tourism receipts worldwide. The Schengen Area, which allows travellers to move freely across 22 EU countries and four extra-EU countries, favours intraregional tourism greatly. The common currency shared by 19 of the 28 member states also facilitates tourism significantly. As in other world regions, inbound trends in EU destinations are driven to a large extent by outbound demand from EU source markets (see chapter 7 for an in-depth analysis).

In 2016, EU countries recorded a solid 4% increase in international arrivals, up 21 million from 2015. Total arrivals reached half a billion, accounting for 40% of the world's total. It was the seventh consecutive year of sustained growth for the 28 countries of the European Union, following the 2009 global financial and economic crisis.

EU countries recorded, overall, euro 342 billion in international tourism receipts, a 3% increase in real

terms, which is consistent with growth in arrivals. This is above the increase for Europe overall and in line with worldwide growth. In nominal terms, receipts increased by 6 billion both in euros and in US dollars.

The group of eight **EU destinations in Southern and Mediterranean Europe,** the most visited group of countries within the EU, led growth with an 8% increase in arrivals to reach 193 million. Also, 5% growth in international tourism earnings to euro 132 billion was recorded, with solid performance in most destinations. The nine **EU destinations in Central and Eastern Europe** also recorded robust growth, with arrivals up 7% to a total of 71 million and with tourism receipts up 8% to euro 31 billion. Arrivals to the five **EU destinations in Northern Europe** grew by 5% to 66 million, while receipts reached euro 62 billion (+5%). Arrivals to the six **EU destinations in Western Europe** remained flat (+0%) at 171 million, with mixed results at the country level. Receipts declined 1% to euro 117 billion.

Within the European Union, arrivals to the five emerging economies – Bulgaria, Poland, Hungary, Romania and Croatia – grew somewhat faster, at a rate of 8%, while receipts grew 10%, reaching euro 29 billion. Arrivals to the 23 advanced economies, including the 19 countries in the euro area, grew by 4%, a solid growth rate consistent with the EU's overall results. Receipts earned by advanced economies grew 3% to euro 313 billion.

#### Solid growth across most extra-EU destinations, weighed down by results in Turkey and the Russian Federation

Most of the **26 destinations outside the European Union (extra-EU)** reported robust results in 2016, but the decline in arrivals to Turkey and the Russian Federation led to an overall decrease of 6% in arrivals to this group of destinations. Overall, receipts for these destinations also decreased 7% to euro 64 billion (euro 70 billion in 2015).

Despite sound results across the majority of destinations, arrivals to **extra-EU destinations in Southern and Mediterranean Europe** (-16%) were weighed down by the steep decrease in arrivals to Turkey (-23%) in the aftermath of various terrorist attacks and a failed coup d'état. International tourism receipts earned by this group of countries decreased 19% to euro 26 billion (euro 33 billion in 2015).

International tourist arrivals to **extra-EU destinations in Central and Eastern Europe** remained flat (+0%) despite solid growth among most destinations, weighed down by a 9% decrease in the Russian Federation. International tourism receipts increased 1% to euro 16 billion. Meanwhile, most **extra-EU destinations in Northern and Western Europe** turned in robust results, with arrivals up 6% to 19 million and earnings rising to euro 22 billion (+14%).

EU, International Tourist Arrivals and Tourism Receipts (local currencies, constant prices) Change over previous year

#### International arrivals relative to population

Given Europe's geography and socioeconomic development, its ratio of international arrivals relative to overall population is the highest among UNWTO regions, with 680 arrivals per 1,000 inhabitants in 2016. For the subgroup of EU countries it is even higher, averaging 980 arrivals per 1,000 inhabitants by receiving 500 million international arrivals (40% of the world's total) on a total population of 510 million in 2016 (7% of the world). These rates stand well above the average for the world (170 arrivals per 1,000 inhabitants) and the group of advanced economies (650 arrivals per 1,000 inhabitants). It is also an indicator of the importance of tourism in many economies in the EU.

By group of countries, EU destinations in Southern and Mediterranean Europe (1,420 arrivals per 1,000 inhabitants) and in Western Europe (930 arrivals per 1,000 inhabitants) received the largest number of arrivals per population. EU destinations in Central and Eastern Europe (730 arrivals per 1,000 inhabitants) and in Northern Europe (720 arrivals per 1,000 inhabitants) also have a high tourism density.

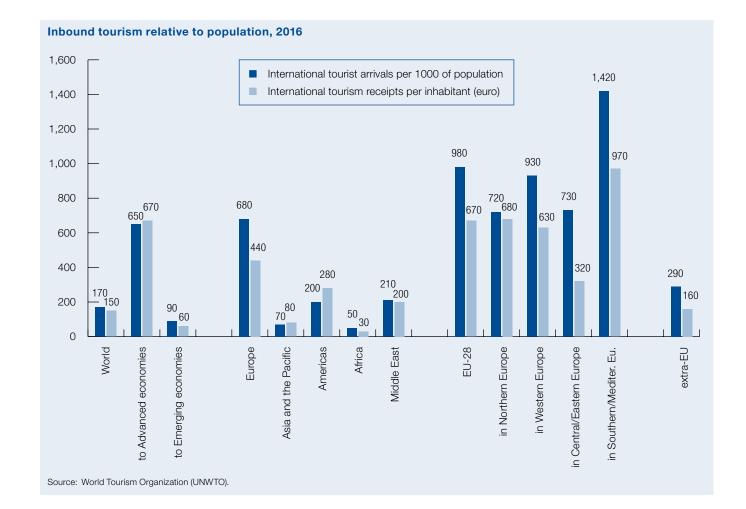

Extra-EU destinations receive fewer arrivals per population, averaging 290 per 1,000 inhabitants in 2016, but this is well above the world average for the group of emerging economies (90 arrivals per 1,000 inhabitants).

By contrast, Africa, with a population of 1 billion people (15% of the world's total) and 57 million international arrivals (5% of the world's total), only received 50 arrivals per 1,000 inhabitants.

#### International tourism receipts relative to population

On average, every inhabitant of **Europe** earned euro 445 in 2016 from international tourism, well above the world average of euro 151 per capita.

Within Europe, **EU destinations** earned euro 671 per capita from international tourism. EU destinations in

Southern and Mediterranean Europe recorded the highest average earning of euro 943 per capita. EU destinations in Northern Europe earned euro 689 per capita and EU destinations in Western Europe euro 639 per capita, while EU destinations in Central and Eastern Europe earned euro 310 per capita.

**Extra-EU destinations** earned comparatively less euros per capita from international arrivals, averaging euro 160 per capita in 2016.

#### International arrivals by purpose of visit

Like in most parts of the world, holidays, recreation and other forms of leisure are the main purposes for travel to **EU destinations.** International arrivals for these purposes represented 61% of total arrivals to EU destinations in 2016, somewhat above the world average of 57% (table 2.3). Some 15% of international tourists in the EU travelled for business and professional purposes, while another 24% travelled for other reasons such as visiting friends and relatives (VFR), religious reasons and pilgrimages, and health treatment.

In 2016, travel for holidays, recreation and other forms of leisure accounted for about 47% of international tourist arrivals in **extra-EU destinations.** These destinations are characterised by a much larger share of travel for other purposes, such as VFR and religious travel, than other world regions (41% in 2016 against a world average of 29%). Travel for business and professional purposes accounted for 12% of arrivals.

#### International arrivals by mode of transport

**Air travel** has become the preferred mode of transport, with 57% of overnight visitors worldwide travelling to their destination by air in 2016, compared to 44% in 1995 (table 2.4). The remainder travelled by **surface transport** (43%), whether by **land** (40%) or **water** (4%).

Air travel is also the dominant mode of transport in **EU destinations,** with 55% of international tourists using this form of transport in 2016 compared to 45% by land or water. By group of countries, air travel is highest in EU destinations in Northern Europe (75% of arrivals), followed by those in Southern and Mediterranean Europe (67%), in Western Europe (44%) and in Central and Eastern Europe (28%).

#### About international tourism receipts data

International tourism receipts are the earnings generated in destination countries from expenditure by international visitors, both overnight and same-day, on accommodation, food and drink, local transport, entertainment, shopping and other services and goods.

For the receiving country, receipts from international visitors count as exports and are a vital source of foreign currency revenues for many destinations. Tourism receipts are an important contributor to local economies worldwide, creating much-needed employment and opportunities for development.

With financial data measured in different currencies it is complicated to accurately determine variations in relative terms, as receipts have to be expressed in a common currency like the US dollar or the euro and generally are reported at current prices, thus not taking account of exchange rate fluctuations and inflation.

Exchange rate fluctuations can substantially influence the values in US dollars reported from year to year. When the dollar appreciates against for instance the euro, worldwide receipts expressed in dollars decrease in relative terms, and vice versa when the dollar depreciates.

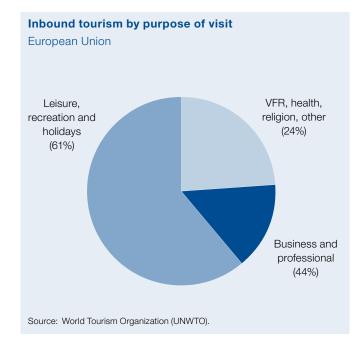

While the average US dollar-euro rate remained virtually unchanged from 2015 to 2016, exchange rate movements can sometimes be significant, distorting the trend in nominal terms. Between 2014 and 2015 for instance, the US dollar appreciated by 20% against the euro in average yearly terms, and to different extents against most other world currencies. See further the section on the exchange rate of the euro in chapter 1.

In order to account for exchange rate fluctuations as well as inflation, growth in tourism receipts is computed in real terms, i.e. using local currencies at constant prices. For this, international tourism receipts expressed in US dollar values (for reason of comparison) were converted back to the local currencies of each destination, weighted by the share in the total, and deflated by the relevant rate of inflation. Although in this way data are made comparable, care should nevertheless be taken in interpreting the trends, as individual country statistics can be subject to revision even after some time. Growth in air travel has been fuelled by the surging demand for international tourism, including the rising trend among Europeans to take many short leisure trips abroad throughout the year. The deregulation of the European airline industry and the rise of low-cost carrier (LCC) services have also contributed to this strong growth. According to the International Civil Aviation Organization (ICAO), LCCs in Europe represent 32% of worldwide LCC passengers carried, slightly above LCCs from Asia and the Pacific (31%) and above the world average of 28%.

Over time, the share of transport by land and water in the EU has decreased from 64% in 1995 to 45% in 2016. Surface transport is still dominant in EU destinations in Central and Eastern Europe where it accounts for 72% of arrivals, as well as in EU destinations in Western Europe with 56% of arrivals. By contrast, surface transport represents 33% in EU destinations in Southern and Mediterranean Europe and 25% in EU destinations in Northern Europe.

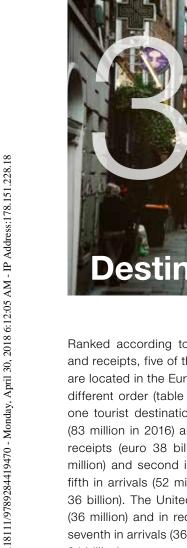

**Extra-EU destinations** are characterised by a larger share of transport by land or water (55% of arrivals) than by air (45%). Surface transport is highest in extra-EU destinations in Central and Eastern Europe (69%), followed by extra-EU destinations in Western Europe (59%), in Southern and Mediterranean Europe (41%) and in Northern Europe (33% of arrivals).

As for EU destinations, the share of air travel is highest in extra-EU destinations in Northern Europe (67% of arrivals), followed by extra-EU destinations in Southern and Mediterranean Europe (59%), in Western Europe (41%) and in Central and Eastern Europe (31%).

Ranked according to both international tourist arrivals and receipts, five of the top ten destinations in the world are located in the European Union, although they rank in different order (table 3.1). France is the world's number one tourist destination in terms of international arrivals (83 million in 2016) and the fifth in international tourism receipts (euro 38 billion). Spain is third in arrivals (75 million) and second in receipts (euro 55 billion). Italy is fifth in arrivals (52 million) and seventh in receipts (euro 36 billion). The United Kingdom is sixth both in arrivals (36 million) and in receipts (euro 38 billion). Germany is seventh in arrivals (36 million) and eighth in receipts (euro 34 billion).

This chapter extends the analysis of the previous chapter with a further breakdown by country, for both EU and extra-EU destinations, of the international tourist arrivals and international tourism receipts data compiled by UNWTO. Note that changes from year to year for the receipts data aggregated by country groupings in chapter 2 are computed in real terms (based on local currencies at constant prices, i.e. adjusted for exchange rate fluctuation and inflation). When referring to receipts by individual destinations throughout this chapter, changes are in local currencies at current prices.

#### **EU** destinations in Southern and Mediterranean Furone

Within the EU, the eight destinations in Southern and Mediterranean Europe, the most visited group of countries, led growth with an 8% increase in arrivals in 2016 to 193 million, from solid performance in most destinations (table 3.2). The redirection of tourism flows from other European destinations due to security concerns also fuelled growth in arrivals. The Iberian destinations of Portugal and Spain drove results in this group, enhanced by strong demand from European source markets. International tourism receipts earned by these destinations reached euro 132 billion, which represents 39% of EU's total international tourism receipts (table 3.3).

Spain, the world's third most visited destination after France and the United States, received 7 million more international tourist arrivals in 2016 to reach 75 million, a solid 10% increase that follows a decade of extraordinary performance in tourism. Spain leads in international tourism receipts in the EU with euro 55 billion in 2016 (16% of EU's total receipts), an increase of 7% compared to the previous year.

Portugal also showed solid performance in 2016, with international quest arrivals in accommodation establishments growing 12%. A new survey of international arrivals at frontiers estimated a total of 18 million overnight visitors in 2016. Tourism earnings grew by 11% to euro 13 billion.

Arrivals to **Slovenia** (+12%) grew strongly in 2016 to reach a total of 3 million. International tourism receipts grew 4% to a total of euro 2 billion.

**Croatia** continues to reap the benefits of the successful rebuilding of its tourism sector over the last decade. In 2016, arrivals grew 9% for the second year in a row, to a total of 14 million, enhanced by increased air connectivity. Receipts grew in line with arrivals (+8%) to a total of euro 9 billion.

Arrivals to **Greece** grew 5% in 2016 to a total of 25 million. Growth peaked towards the end of the year, recovering from a decrease in arrivals during the first part of the year due to the refugee and migrant crisis, while tourism receipts fell by 7% to euro 13 billion.

**Italy,** Europe's third largest destination, welcomed 52 million arrivals (+3%), following similar growth in 2015. Growth in this destination has been driven by a continuous increase in tourism flows from Asia and the rise of new tourism services, such as the supply through accommodation rental platforms. The country is the second top earner in this group, recording euro 36 billion, 2% more than in 2015.

Enhanced air connectivity along with a strong perception of safety also played in favour of the island destinations of **Cyprus** (+20%) and **Malta** (+10%), which recorded 3 million and 2 million arrivals in 2016, respectively. Receipts for both destinations grew accordingly, with Cyprus earning euro 3 billion (+11%) and Malta euro 1 billion (+5%).

#### EU destinations in Central and Eastern Europe

The nine **EU destinations in Central and Eastern Europe** recorded a 7% increase in arrivals, with 4 million more arrivals than in 2015, reaching a total of 70 million. Tourism receipts earned by this group of countries reached euro 31 billion.

**Slovakia** led growth in arrivals and receipts, both increasing by 17%. Arrivals in accommodation establishments reached 2 million (arrivals at frontiers still pending) and earnings euro 2 billion. **Bulgaria** also recorded a strong growth in arrivals and receipts (both +16%). Arrivals rose to 8 million, while earnings increased to euro 3 billion.

Both **Romania** and **Lithuania** welcomed 2 million tourists each (both +11%). International tourism receipts

earned by Romania grew 2% to euro 2 billion, while Lithuania earned euro 1 billion (+5%) from receipts.

In 2016, **Hungary** reported 7% growth for both international tourist arrivals (15 million) and international tourism receipts (euro 5 billion). The **Czech Republic** reported 4% growth in arrivals to 12 million, while receipts grew 3% to euro 6 billion. **Estonia** welcomed 3 million tourists (+5%) and reported a 3% increase in tourism earnings to euro 1 billion.

International arrivals to **Poland** grew 4% to 17 million, while tourism earnings grew 10% to euro 10 billion. The World Youth Day in Krakow attracted more international tourists, as did the city of Wroclaw, one of the 2016 European Capitals of Culture.

By contrast, **Latvia** recorded the only decrease in arrivals in this group (-11%), with international tourist arrivals totalling 2 million. Receipts also decreased 3% to euro 1 billion.

#### **EU destinations in Northern Europe**

The five **EU destinations in Northern Europe** recorded robust results with a 5% increase in arrivals to 72 million. Tourism earnings were worth euro 61 billion in 2016.

**Sweden** reported 8% growth in arrivals, driven by increased investment in the tourism sector. Within this group, Sweden led growth in international tourism receipts, which increased 13% to euro 11 billion.

**Finland** reported 6% growth in arrivals to a total of 3 million tourists, recovering from the slowdown in 2015 (-4%). Receipts also grew 6% to euro 2 billion. Growth was driven by an investment boom in hotels and restaurants, along with stronger demand from EU source markets and China.

**Ireland** also registered a 6% increase in arrivals, welcoming 10 million overnight visitors in 2016 for the first time. Tourism receipts grew by a robust 8% to euro 5 billion. Growth was fuelled by improved air connectivity and a perception of safety.

The **United Kingdom**, the largest destination in this group, reported a 4% increase in arrivals to 36 million. Growth was comparatively modest given the depreciation of the British pound following the vote to leave the European Union (Brexit) in June 2016, which improved the affordability of the destination for most source markets.

International tourism receipts increased by 3% measured in British pounds, but decreased 13% in euro terms, to euro 38 billion, due to the pound's depreciation.

Arrivals to **Denmark** grew 3% to 11 million, while tourism earnings grew at a similar pace of 6% to euro 6 billion.

#### EU destinations in Western Europe

The group of six **EU destinations in Western Europe** reported flat growth in international arrivals (+0%). Results at country level were rather mixed, influenced by security concerns which partly redirected tourism flows. Total arrivals amounted 171 million, which brought along euro 117 billion in tourism earnings.

International arrivals in the world's top destination **France** decreased by 2% to 83 million in the aftermath of the Nice attack in July 2016 and the attacks in Paris in 2015. A number of air traffic control strikes and the floods in Paris also affected results. On the upside, the 2016 UEFA European Championship increased visitor numbers in several French cities where the games were held. Receipts earned by France decreased 5% to euro 38 billion, following a decrease of 8% in 2015.

**Belgium** also suffered a decrease in arrivals of 10% to 7 million, due to safety concerns after the Brussels attacks in March 2016. Receipts decreased 3% to euro 11 billion.

Results in **Luxembourg** were also influenced by the security threats in neighbouring France and Belgium, recording a 3% decrease in both arrivals (1 million tourists) and receipts (euro 4 billion).

By contrast, **the Netherlands** reported a 5% increase in international arrivals to 16 million, partly thanks to various cultural blockbuster exhibitions in the country and a steady growth in tourism demand from China and other emerging markets. International tourism receipts grew 7% to euro 13 billion.

**Austria** welcomed 28 million tourists (+5%), with particularly strong city tourism, supported by robust investments in the tourism sector and favourable weather conditions. Tourism earnings rose by 6% to euro 17 billion.

**Germany,** the 2nd largest destination within this group, reported 2% growth (36 million arrivals), with considerable business travel, but weaker leisure travel due to bad weather conditions in the summer season and various terrorist incidents. International tourism receipts earned by the destination grew 2% to euro 34 billion.

# Extra-EU destinations in Southern and Mediterranean Europe

International tourist arrivals (-16%) in the group of **extra-EU destinations in Southern and Mediterranean Europe** decreased in 2016, despite sound results across the majority of destinations. The significant decrease in arrivals (-23%) and receipts (-30%) in Turkey, in the aftermath of various terrorist attacks and a failed coup d'état, weighed down total figures for this group of countries. Weaker demand from the Russian Federation, a key source market for Turkey, also impacted results.

By contrast, all Balkan countries posted solid growth in both arrivals and receipts in 2016. Arrivals to Bosnia and Herzegovina grew 15% while receipts grew 9%. In Serbia, arrivals grew 13% and receipts 10%. Albania reported 8% growth in arrivals and 13% in tourism earnings. Montenegro reported 7% growth in arrivals and 3% growth in receipts. In FYR Macedonia both arrivals and receipts grew 5%.

#### Extra-EU destinations in Central and Eastern Europe

International tourist arrivals to the group of **extra-EU destinations in Central and Eastern Europe** decreased slightly (-1%) to 55 million tourists, while tourism earnings reached euro 16 billion.

Robust growth in most destinations was offset by a decline in arrivals to the Russian Federation (-9%), this group's largest destination, which experienced fewer arrivals from the Commonwealth of Independent States (CIS) countries and some European markets. Tourism earnings in the Russian Federation decreased by 8%. By contrast, arrivals to Georgia (+19%), Ukraine (+7%) and Armenia (+6%) were robust.

# Extra-EU destinations in Northern and Western Europe

Arrivals to the three **extra-EU destinations in Northern and Western Europe** were up by 6% to 19 million. Tourism receipts reached euro 22 billion.

**Iceland** (+39%) enjoyed its sixth consecutive year of double-digit growth in arrivals, welcoming 2 million tourists. International tourism receipts earned by Iceland grew by 36% to euro 2 billion.

Arrivals to **Norway** grew 11% to 6 million, supported by enhanced air connectivity and a more affordable currency compared to its major source markets.

**Switzerland,** the largest destination in this group, welcomed 10 million arrivals and earned euro 15 billion in tourism receipts (+1%).

#### **Tourism trends in 2017**

## International arrivals worldwide grew by a remarkable 7% in 2017

Based on data reported at the beginning of 2018 by destinations around the world, it is estimated that in 2017 international tourist arrivals (overnight visitors) worldwide increased 7% to exceed 1.3 billion. Growth was driven by the global economic upswing, with sustained growth in many destinations and a firm recovery in those that suffered declines in previous years, such as Turkey, Egypt, Tunisia, France and Belgium. The strong recovery in outbound demand from Brazil and the Russian Federation also contributed to results.

By UNWTO region, growth was led by Europe (including both EU and extra-EU destinations). In 2017, international arrivals to this region reached 671 million (+8%), an additional 50 million, after a comparatively weaker 2016. Results reflect the ongoing strength of many destinations and a rebound in those that experienced security incidents last year, particularly Turkey, France and Belgium. In Africa, arrivals grew by 8%, consolidating its 2016 rebound. Asia and the Pacific recorded 6% growth, the Middle East 5% and the Americas 3%.

This analysis of preliminary full-year 2017 results for international tourism is based upon 2017 data on international overnight visitors as reported by destination countries in January 2018. Individual country trends cover the full year 2017 in a few cases only, but in most cases are limited to the period from January through September, October or November 2017. Regional and subregional aggregates for the full year 2017 are estimated by UNWTO based on trends for the year to date and projections for still missing data. For more information and comprehensive statistical data, please see the latest issue of the European Union Short-Term Tourism Trends publication at http://mkt.unwto.org/eu https://ec.europa.eu/growth/tools-databases/vto/ or documents?field\_type\_tid=9040.

26

# EU destinations recorded a robust 8% growth in arrivals in 2017

The 28 countries of the European Union recorded an extraordinary 8% increase in international tourist arrivals in 2017, following 5% growth in 2016. Based on the reported data, it is estimated that EU destinations welcomed 538 million international overnight visitors in 2017, 38 million more than the previous year. Strong demand from virtually all source markets, as well as the rebound in tourism demand from the Russian Federation, contributed to growth.

Most individual destinations in the EU reported healthy results in 2017 for the months over which data is available, compared to the same period of the previous year. A record 13 out of the 28 European Union destinations recorded double-digit growth in arrivals in 2017.

Growth in the European Union was driven by the group of eight **EU destinations in Southern and Mediterranean Europe** (+10%). This group's largest destination Spain (+9%) reported 82 million arrivals in the full year 2017, an outstanding result for such a large base volume and following already sustained growth in previous years.

The other seven destinations in this group all reported double-digit growth. Italy and Greece, second and third largest destination in this group respectively, both reported 10% growth in arrivals through October. Fourth largest destination Portugal (+11% through October) continued to boast strong growth following already robust results in 2016. The highest growth in this group was reported by Slovenia (+17%) and Croatia (+14%) as well as island destinations Malta (+16%) and Cyprus (+15%) (all through November).

The six **EU** destinations in Western Europe (+7%) rebounded from last year's flat results, fuelled by the recovery of Belgium (+12% through September) and top destination France (+8% through September) after dealing with security threats in previous years. The Netherlands (+13% through September) enjoyed the fastest relative increase in arrivals. Germany (+5% through October) and Austria (+4% through November) also reported sound growth.

The group of nine **EU destinations in Central and Eastern Europe** (+6%) reported robust growth in arrivals in 2017. Growth was strongest in Latvia (+12% through October), Romania (+11% through November) and the Czech Republic (+10% through September), all enjoying double-digit growth.

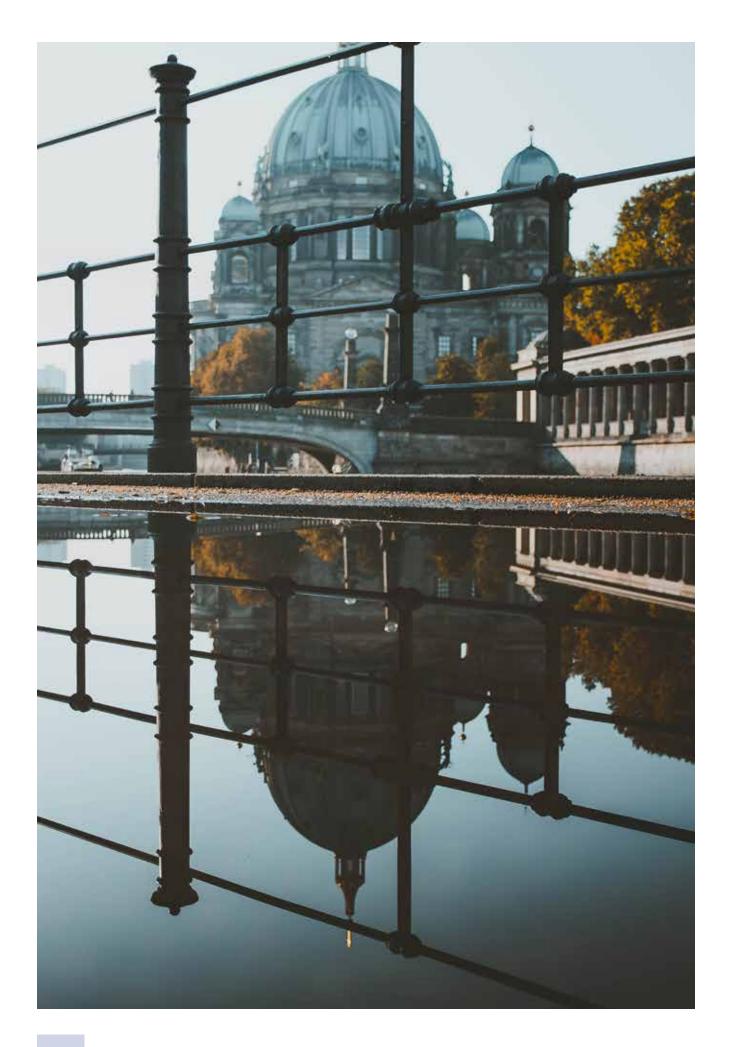

The five **EU destinations in Northern Europe** (+5%) reported positive growth in 2017. Finland (+13% through October) consolidated its recovery after the slowdown in 2015. The United Kingdom, this group's largest destination, recorded 7% growth in arrivals through September despite the 2017 terrorist attacks in London and Manchester.

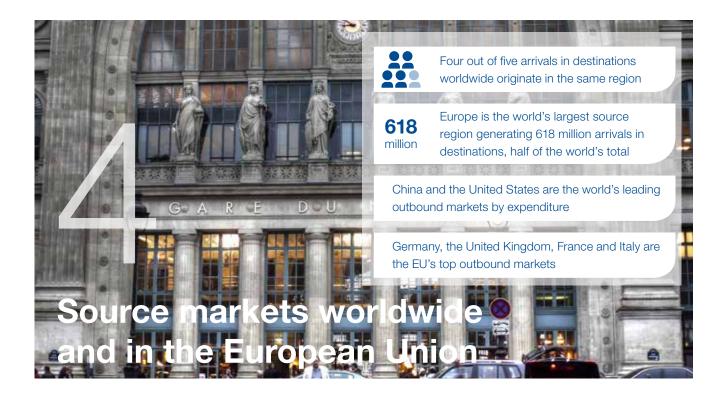

# Solid growth in extra-EU destinations, largely driven by the recovery of Turkey

The group of 26 destinations outside the European Union (extra-EU) reported a robust 12% growth in international arrivals to 133 million, rebounding from last year's decline. Growth was fuelled by **extra-EU destinations in Southern and Mediterranean Europe.** International arrivals to this group of countries grew by 25% over this period, driven by the recovery of Turkey (+29% through November) and the continued strong growth of other major and emerging destinations. Virtually all other destinations posted double-digit growth last year.

**Extra-EU destinations in Northern Europe** (+5%) also reported robust growth in 2017. Iceland (+16% through November) led results once more, followed by Switzerland (+7% through October) and Norway (+2% through September).

In **extra-EU destinations in Central and Eastern Europe** (+4%) results were rather mixed, with doubledigit growth in many destinations in this group offset by a 3% decline in arrivals through September in the Russian Federation, this group's largest destination.

Traditionally, the advanced economies of Europe, the Americas and Asia and the Pacific have been the world's major source markets for international tourism. In recent decades, however, emerging economies in Asia, Central and Eastern Europe, the Middle East, Africa and Latin America have expanded rapidly and are increasingly driving tourism growth, thanks to rising levels of disposable income.

This chapter presents an overview of outbound tourism trends by UNWTO regions based on data collected by UNWTO on the region of origin of international arrivals to destinations worldwide. Furthermore, it analyses major individual country source markets around the world through international tourism expenditure and departures, including all European markets, both EU and extra-EU.

# Most tourists visit destinations within their own region

Besides being the world's largest region in terms of inbound tourism, Europe is also the world's largest source region for outbound tourism, generating an estimated 618 million arrivals in destinations worldwide in 2016, or half of the world's total (50%) (table 4.1).

Asia and the Pacific became the second largest source region in the early 2000s, and generated 320 million arrivals in destinations in 2016 (26% of the world

total). The Americas is the third largest source region, generating 218 million arrivals in destinations (18%), followed by Africa with 43 million (3%) and the Middle East with 41 million (3%).

The large majority of international travel takes place within the traveller's own region. In 2016, about four out of five arrivals (78%) reported by destinations globally originated in the same region (intraregional tourism), while one out of five (22%) originated outside the region (interregional tourism).

Of the 618 million arrivals originating from European source markets in 2016, 521 million (84%) were to European destinations (intraregional tourism), of which 417 million to European Union destinations and 103 million to extra-EU destinations (table 4.2).

Within Europe, Europeans travelled above all to destinations in Southern and Mediterranean Europe, resulting in 168 million arrivals in EU destinations within this subregion and 37 million in extra-EU destinations. Western Europe is the second most popular subregion, with 135 million arrivals in EU destinations and 9 million in extra-EU destinations.

Destinations outside Europe received the remaining 98 million arrivals (16%) from European source markets, of which 35 million in Asia and the Pacific (6%), 32 million in the Americas (5%), 18 million in Africa (3%) and 12 million in the Middle East (2%).

A closer look at arrivals by origin and destination in Europe reveals that out of the 521 million European arrivals in European destinations, 361 million were from EU markets to EU destinations, 54 million from extra-EU markets to extra-EU destinations, 56 million from extra-EU markets to EU destinations and 50 million were from EU markets to extra-EU destinations.

#### China, the United States, Germany, the United Kingdom and France are the world's top spenders on international tourism

The analysis of major individual outbound markets worldwide in this section, and of European Union markets in the next section, primarily focuses on data on expenditure by their residents on international tourism. Expenditure on international tourism counts as imports for the generating country, and as exports for the destination countries benefitting from it.

Most source markets also report data on departures on outbound trips, but this data is generally less homogenous and consistent across source markets than expenditure data. Departure volumes should compared across markets with some caution be as coverage varies by type of trip and the way it is measured. Also, numbers sometimes refer to overnight visits only, and sometimes to all trips including same-day visits (which can be very high in countries with a large share of cross-border tourism). However, changes in volumes are useful to understand trends over time. Note that international departures reported by source markets do not necessarily correspond in number to arrivals in destinations, as a single trip can generate arrivals in more than one destination.

China continues to lead global outbound travel, following ten years of double-digit growth in spending and after rising to the top of the ranking in 2012. In 2016, expenditure by Chinese travellers increased 12% (in local currency) to euro 236 billion (11 billion more than in 2015) (table 4.3). The number of outbound travellers, including same-day trips, rose 6% to 135 million. Chinese outbound demand benefited both short-haul destinations in Asia and the Pacific such as Japan, the Republic of Korea and Thailand, as well as long-haul destinations such as the United States and several in Europe.

Tourism expenditure out of the United States, the world's second largest source market, increased 8% in 2016 to hit euro 112 billion, up 8 billion from the previous year. For the third year in a row, strong outbound demand was

fuelled by a robust US dollar and economy. The number of US residents travelling to international destinations increased 8% to 80 million.

Germany, the United Kingdom, France and Italy are the top source markets in the European Union, and rank third, fourth, fifth and ninth respectively in the world. An in-depth analysis of these and other European source markets (both EU and extra-EU) follows in the last part of this chapter.

In the bottom half of the top ten, Australia is the sixth largest market in spending, with euro 28 billion and 10 million outbound trips in 2016. Canada ranks seventh with euro 26 billion in international spending and 31 million outbound trips. The Republic of Korea spent euro 25 billion in 2016 (+8%) and moved up further to eighth place, after having entered the top ten in 2015. The number of outbound travellers increased 16% to reach 22 million. Hong Kong (China) completes the top ten with expenditure of euro 22 billion and 92 million outbound trips.

Other major interregional source markets outside the top 10 are the emerging economies of the Russian Federation (euro 22 bn), India (euro 15 bn) and Brazil (euro 13 bn), as well as Asian markets Singapore (euro 20 bn), Japan (euro 17 bn) and Taiwan (pr. of China) (euro 15 bn), and Middle Eastern markets Saudi Arabia (euro 17 bn), United Arab Emirates (euro 15 bn) and Kuwait (euro 11 bn).

# EU outbound tourism led by Germany, the United Kingdom, France and Italy

**Europe (both EU and extra-EU)** generates 35% of the world's international tourism expenditure. In 2016, expenditure from European source markets amounted to euro 392 billion, of which euro 315 billion (28% of the world's total) from EU countries and 78 billion from extra-EU countries (7%) (table 4.4).

The **28 countries of the European Union** spent euro 315 billion on international tourism in 2016, 8 billion more than the previous year. As in other regions of the world, outbound demand from within the region fuels arrivals in European destinations more than demand from outside the EU. Additionally, EU source markets are an important source of tourism growth in other world regions. See further Chapter 5 for an in-depth analysis of tourism by EU residents.

The group of six **EU countries in Western Europe** accounted for the largest share of tourism spending in the EU, totalling euro 154 billion in 2016, 4 billion more than in the year before.

Germany, Europe's top source market and the world's third largest, reported euro 72 billion in international tourism spending in 2016. International departures reached 91 million (table 4.5).

Expenditure from France, the world's fifth largest market reached euro 37 billion in 2016, with international departures totalling 26 million.

Belgium reported expenditure of euro 18 billion and 13 million departures, and the Netherlands expenditure of euro 16 billion and 18 million departures. Residents from Austria spent euro 9 billion on international tourism and departed on 12 million outbound trips. Expenditure from Luxembourg amounted to euro 3 billion with 1 million departures.

The five **EU countries in Northern Europe** spent a combined euro 90 billion on international tourism in 2016, almost the same as in 2015.

Demand from the United Kingdom, the world's fourth largest source market and this group's largest, remained sound last year despite the depreciation of the British pound following the referendum on EU membership (Brexit). UK residents' visits abroad grew 8% to 69 million, with expenditure close to euro 59 billion. While expenditure increased 10% in pound terms, in euro terms there was a slight decrease due to the weaker pound.

Expenditure from Ireland amounted to euro 6 billion with 8 million departures, including same-day trips. In Finland, expenditure rose to euro 5 billion, generated by 9 million departures. The number of departures from Denmark reached 10 million in 2016, with expenditure at euro 8 billion. Sweden reported euro 13 billion in tourism spending.

The group of eight **EU countries in Southern and Mediterranean Europe** spent a combined euro 49 billion on international tourism in 2016, up 3 billion from 2015.

Italy, this group's top spender and the world's ninth largest, increased its international tourism expenditure to euro 23 billion in 2016. The number of Italian residents departing to international destinations reached 29 million.

Spain, the second largest source market in this group, recorded a strong 11% increase in spending to euro 17 billion in 2016, which marks the second consecutive year of double-digit growth after reaching the pre-crisis expenditure mark of 14 billion in 2014. Departures from Spain grew by 7% to 15 million.

Portugal spent euro 3.8 billion on international tourism in 2016. Residents from Greece spent euro 2 billion on international tourism and departed on 7 million outbound trips. Tourism spending in Croatia totalled euro 900 million, with 1.6 million departures. Expenditure in island source markets Cyprus and Malta reached euro 1.1 billion and 400 million, respectively. International departures (including same-day trips) from Cyprus amounted to 1.3 million, while Malta reported half a million overnight departures. Slovenia spent euro 900 million in international tourism in 2016 with 2.9 million overnight departures.

The group of the nine **EU countries in Central and Eastern Europe** spent euro 21 billion on international tourism in 2016, 1 billion more than in 2015.

Residents from Poland spent euro 7 billion and departed on 11 million outbound trips. Expenditure from the Czech Republic reached euro 4.4 billion with 6 million departures. Hungary reported expenditure of euro 2 billion and 7 million departures. In Slovakia, expenditure amounted to euro 2 billion with 3 million departures, including same-day trips.

Romania reported expenditure of euro 1.9 billion and 16 million departures in 2016. However, departures here are likely to refer to all travellers from Romania including for purposes other than tourism, such as cross-border workers.

In Estonia, tourism expenditure of euro 1 billion was generated by 1.3 million departures. Expenditure by Lithuania totalled euro 900 million, with 1.9 million departures. Latvia spent euro 600 million in international tourism and reported 1.2 million international departures.

# Tourism expenditure from extra-EU source markets weighed down by the Russian Federation and Turkey

The group of **26 extra-EU source markets** generated a total of euro 78 billion in international tourism expenditure in 2016, 9 billion less than in 2015, mainly due to the decline in international tourism demand from the Russian Federation and Turkey.

Within this group, **advanced extra-EU economies** reported overall robust results in international tourism expenditure. Switzerland spent euro 15 billion in 2016 with 14 million international departures. Norway spent euro 14 billion with departures reaching 8 million. Israel's expenditure rose to euro 6 billion and the number of departures to 7 million.

By contrast, among **emerging extra-EU economies**, expenditure from the Russian Federation declined further in 2016 to euro 22 billion, while departures declined to 25 million. The weaker demand from this group's major source market was reflected in tourism results across a number of destinations in Central and Eastern Europe, as well as Southern and Mediterranean Europe.

In Turkey, another major source market in this group, international tourism expenditure declined 11% to euro 4.3 billion, in line with a 10% decline in departures to 8 million.

On the other hand, Ukraine recovered from 2015's weaker demand and spent euro 4.5 billion on international tourism (+12%) with departures up 7% to 25 million.

Some 61% of European Union residents made one or more tourism trips in 2015. Overall, residents from the EU made 1.2 billion trips (both domestic and international) and spent 5.9 billion nights at accommodation establishments.

This chapter takes a closer look into the tourism participation of EU residents, their trips made and their nights spent at accommodation establishments, both within their country of residence (domestic tourism) and outside (international tourism). The comprehensive data in this chapter on tourism trips made by residents is collected in EU countries through traveller surveys at border crossings or household surveys and made available through Eurostat<sup>1</sup>.

#### Six out of ten EU residents participate in tourism

According to Eurostat, 61% of EU residents aged 15 or over participated in tourism in 2015, making at least one tourism trip for personal purposes (i.e. excluding trips for professional purposes) (table 5.1). Participation in tourism is sometimes referred to as propensity, the proportion of the population that makes at least one tourism trip of a specified minimum duration in a given reference period.

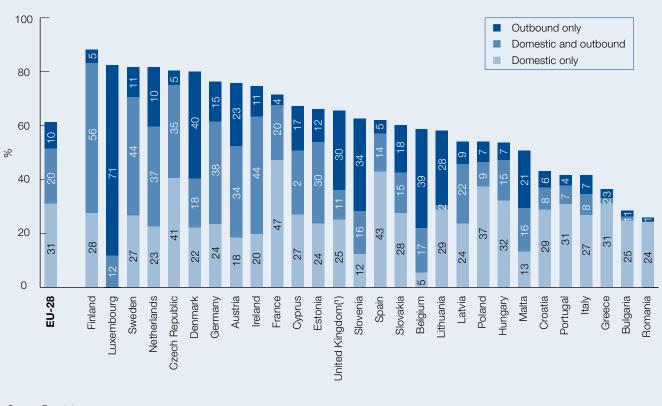

Slightly more than half or 51% engaged in domestic tourism with at least one overnight stay (among which

31% in domestic tourism only and 20% in both domestic and international), while 30% took part in international tourism (10% in international only and 20% in both).

The countries with the highest participation in tourism relative to their population were Finland, Luxembourg, Sweden, the Netherlands and the Czech Republic, while the lowest participation came from Romania, Bulgaria, Greece, Italy and Portugal.

EU residents who participated in tourism made on average 4 personal trips during 2015, i.e. the total number of tourism trips made divided by the number of those who made these trips. The average was highest in Finland and Denmark with 8 personal trips per tourist and lowest in Bulgaria and Greece with less than 2 trips per tourist.

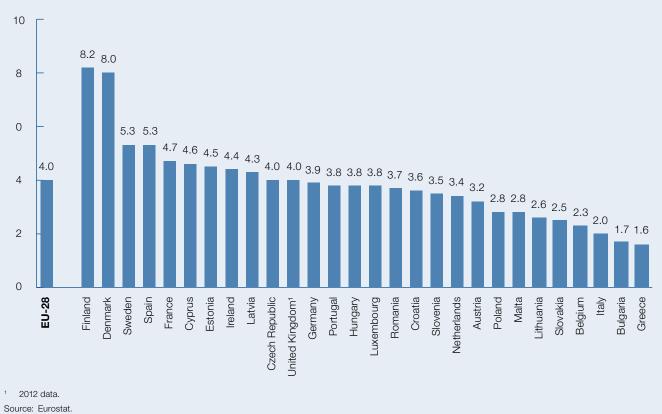

The most recent available data on reasons for not participating in tourism are for 2013 (table 5.2). EU-wide, 40% did not engage in tourism, of which 53% due to financial reasons, 20% for health reasons, 18% due to work or study commitments and 18% for no motivation to travel. According to Eurostat statistics on income and living conditions, 34% of the population in the EU could not afford one-week holidays in 2015, though this has dropped from a peak of 39% in 2012. This proportion was highest in Romania (68%), Croatia (66%), Bulgaria (60%), Hungary (55%), Greece (54%) and Cyprus (54%).

#### Share of the EU population (aged 15 and over) participating in tourism by destination, 2015

Source: Eurostat.

34

# EU residents spent 6.0 billion nights on 1.2 billion trips

EU residents made 1.2 billion trips with overnight stays in 2015, regardless of destination and duration (table 5.3). During their trips EU residents spent a total of 6.0 billion nights. More than half of these nights (54%) were spent in rented accommodation.

Trips for personal purposes made up 89% of all tourism trips in 2015. Nearly half of trips (48%) had holidays, leisure and recreation as the main purpose, 37% were to visit relatives and friends and 4% were for other purposes such as pilgrimages or health treatment. The remaining 11% were trips for professional purposes (e.g. business trips).

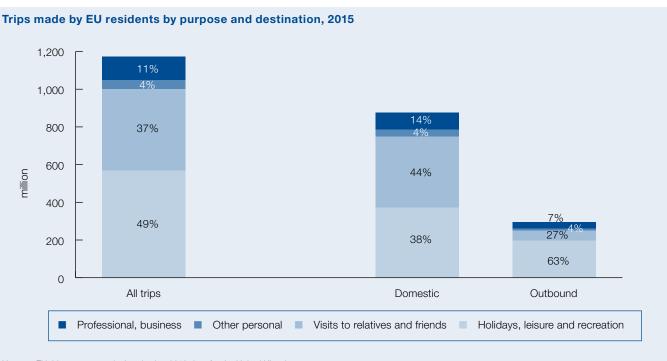

Three out of four trips, 876 million, were to destinations in the tourist's own country of residence (domestic tourism), while 295 million trips (25%) were outside the country (international tourism). Of all nights, 3.5 billion (58%) were spent in the country of residence, while 2.5 billion nights (42%) were spent outside it. The proportion of domestic tourism is higher for trips than for nights, as domestic trips tend to be of shorter duration. Average length of stay is 4 nights per domestic trip and 8 nights per international trip, with an average of 5 nights per trip overall.

# Euro 89 per night on international trips and euro 53 on domestic ones

The longer length of stay in international trips is also reflected in higher expenditure per trip (table 5.4)<sup>2</sup>. EU travellers spent an average of euro 212 per domestic trip, but euro 751 per international trip, more than three times as much. The average expenditure was euro 348 per trip overall.

Expenditure per night is also rather higher for international trips. EU residents spent an average euro 89 per night on international trips and euro 53 per night on domestic ones.

The higher expenditure on international trips reflects that comparatively more nights are spent in hotels and similar establishments, generally with a higher cost. On international trips 44% of nights were spent in hotels and similar establishments, while on domestic trips this figure was only 20%, as domestic visitors often stay at second homes or accommodation provided for free by friends and relatives.

Note: EU-28 aggregate calculated using 2013 data for the United Kingdom Source: Eurostat (online data code: tour\_dem\_ttpur).

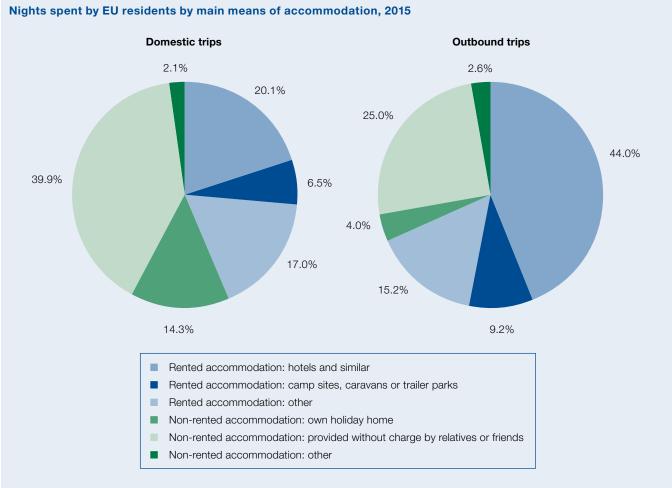

#### Nights and expenditure by EU countries

The EU countries generating the largest number of nights overall were Germany (with 22% of all nights spent by EU residents), France (18%), the United Kingdom (14%) and Spain (10%). For international tourism specifically, Germany and the United Kingdom accounted for the largest number, with 28% and 23% of nights respectively, followed by France (8%) and the Netherlands (7%).

The number of international nights varies greatly among source markets. The share of international nights is bigger in comparatively smaller countries such as Luxembourg, where almost all nights are spent on outbound tourism (99%), Belgium (89% of all nights), Malta (83%), Cyprus (79%) and Slovenia (78%). In larger countries such as Greece (12%), Romania (13%), Spain and France (both 18%) and Portugal (20%) the share of international nights is lower. The demand for international tourism relative to the country's population was highest in Luxembourg (22 nights per inhabitant) and Cyprus (19 nights per inhabitant), which are relatively small countries engaging in considerable outbound tourism. In Ireland, the Netherlands and Denmark the proportion was 12 nights per inhabitant and in Finland, Germany and the United Kingdom 11 nights per inhabitant.

Finland has the highest average expenditure in international tourism per night (euro 156 per night), followed by Malta and Austria (both euro 138 per night). Tourists from Luxembourg spent euro 122 per night, and those from Ireland euro 119 per night.

The highest average expenditure per international trip was recorded in France (euro 975 per trip), followed by Cyprus (euro 960), Malta (euro 898) and Austria (euro 893). Spending from Ireland, Finland, Germany and Spain also exceeded euro 800 per trip.

Note: EU-28 aggregate calculated using 2013 data for the United Kingdom Source: Eurostat (online data code: tour\_dem\_tnac).

#### International destinations visited by EU residents

Of the 2.5 billion nights spent by EU residents outside their country of residence (international nights) in 2015, 1.9 billion were in Europe, of which 1.7 billion (65%) in EU destinations and 220 million (8%) in extra-EU destinations. The remaining 696 million (27%) were spent in destinations outside Europe (interregional nights).

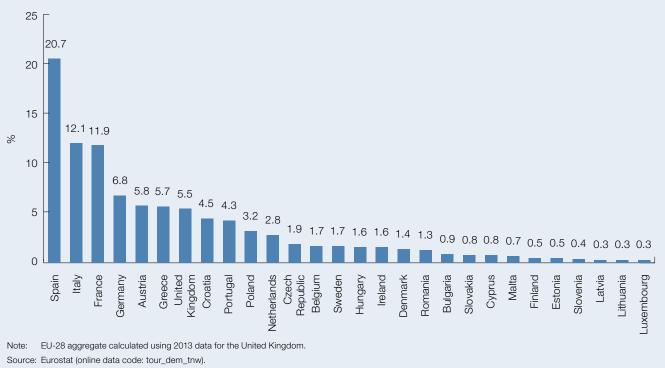

By number of trips, the proportion of travel within the EU is larger. 76% of the 310 million international trips taken in 2015 were to destinations in the EU (237 million), while 10% correspond to extra-EU destinations (30 million). The remaining 14% corresponds to destinations outside Europe (43 million). This results in an average of 7 nights per trip at EU destinations, 8 nights at extra-EU destinations and a higher 16 nights outside Europe.

When travelling internationally, the destination of the trip is often based on proximity, climate, or both. Furthermore, migration, historic and cultural ties, and language also play a role when choosing a destination. Such is the case for residents from Cyprus and Malta travelling to the United Kingdom, or Portuguese residents travelling to Brazil. EU destinations in Southern and Mediterranean Europe account for almost half (49%) of international nights within the EU, followed by destinations in Western Europe (29%), in Northern Europe and in Central and Eastern Europe (both 11%).

By individual destination, Spain is top for EU residents, accounting for 21% of international nights spent at EU destinations. Italy and France follow with 12% of the total each. Germany (7%), Austria, Greece and the United Kingdom (all 6%) also account for a significant share of nights.

When traveling outside the European Union, the top destinations for EU residents are Turkey (accounting for 13% of trips to non-EU destinations), the United States (also 13%) and Switzerland (10%). Norway, Morocco, Egypt, Russia Federation, Thailand, the United Arab Emirates and China are other major destinations for EU travellers. For 41% of trips outside the EU, the destination was not specified.

1 http://ec.europa.eu/eurostat/statistics-explained/index.php/Tourism\_trips\_of\_Europeans

2 http://ec.europa.eu/eurostat/statistics-explained/index.php/Tourism\_statistics\_-\_expenditure

In 2016, there were 608 thousand accommodation establishments in the European Union offering 31 million bed-places. Domestic and international guests together spent 3.1 billion nights in EU accommodation establishments, generated by 1 billion arrivals. This represents an average of 3 nights spent per arrival at accommodation establishments.

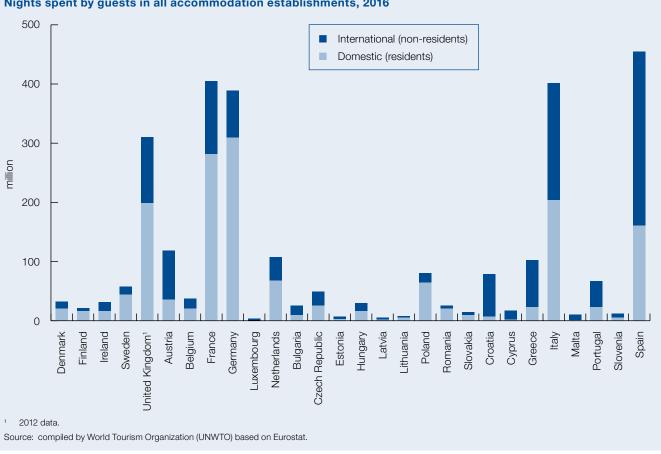

This chapter examines the accommodation sector in the European Union based on the latest available data on capacity offered by EU accommodation establishments and the demand satisfied as measured through guests arrivals and nights. This data is aggregated and disseminated by Eurostat and collected under an EU directive by national statistics institutions.<sup>1</sup>

# EU has 608 thousand accommodation establishments with 31 million bed-places

EU destinations counted 608 thousand accommodation establishments in 2016, mostly small and medium-sized enterprises (SMEs). Eurostat classifies three types of establishments: 202 thousand (33%) were hotels and similar accommodation, 378 thousand (62%) were holiday and other short-stay accommodation (apartments, bungalows or chalets)<sup>2</sup>, and 28 thousand (5%) were camping grounds and recreational vehicle/trailer parks (table 6.1). These accommodation establishments offered a total of 31 million bed-places<sup>3</sup>. Hotels and similar establishments counted 14 million bed-places (44% of the total) in 6.7 million rooms. Per hotel there were 68 bedplaces distributed in 33 rooms on average, or close to two bed-places per room on average. Hotel sizes vary considerably with many small often family-run businesses and comparatively few large ones: 60% of the total has less than 25 rooms, 32% has 25-99 rooms and the remaining 8% has 100 rooms or more. The Czech Republic, Germany and Hungary have comparatively larger shares of small hotels (less than 25 rooms). The share of medium size hotels (25-99 rooms) is higher in Poland, Italy, Greece and Malta, while Sweden, Croatia, Bulgaria and Malta have bigger shares of large hotels (+100 rooms).

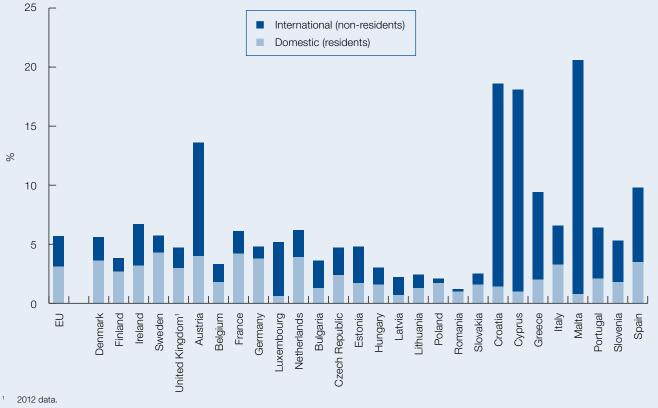

Camping grounds and recreational vehicle/trailer parks had another 10 million bed-places on offer (32% of the total), or 351 bed-places per establishment on average. Holiday and other short-stay accommodation account for 8 million bed-places (24% of the total). Due to the comparatively low average of 20 bed-places per establishment, capacity is less in this category, even though the majority of establishments are of this type.

The European Union's five largest countries account for two thirds of the EU's total bed-place capacity (in all types of establishments): France (5.1 million or 16%), Italy (4.9 million or 16%), the United Kingdom (4.0 million or 13%),

### Nights spent by guests in all accommodation establishments, 2016

Source: compiled by World Tourism Organization (UNWTO) based on Eurostat.

Spain (3.5 million or 11%) and Germany (3.4 million or 11%) (table 6.2). Each country's accommodation sector has its own mix of establishments: Italy has the largest share of bed-places in both holiday-type establishments (20% of the total) and hotels (16%), while France has the largest capacity overall, and specifically in camping-grounds (28%), as camping is a very popular way of holidaying in the country.

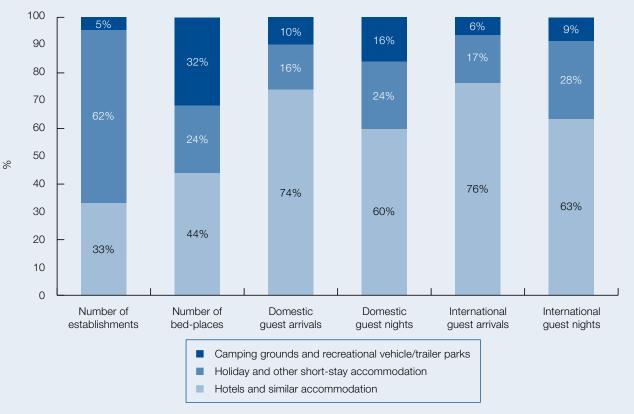

# Guests spent 3.1 billion nights in EU accommodation establishments in 2016

A total of 3.1 billion nights were spent in EU accommodation establishments in 2016, almost equally split between domestic visitors (residents) and international visitors (non-residents) with 1.6 billion nights (51%) and 1.5 billion (49%) respectively (table 6.4).

Total arrivals in accommodation establishments reached 1 billion in 2016, with 3 nights spent per arrival on average. Domestic visitors accounted for 609 million arrivals (61%) and international visitors for 391 million (39%). International visitors stayed on average about one day longer (3.8 nights per establishment) than domestic visitors (2.6 nights). Hotels and similar establishments were the most popular form of accommodation, accounting for 62% of total nights spent, followed by holiday and other types of short-stay accommodation (26%) and camping grounds, recreational vehicle parks and trailer parks (12%). The share of the latter is comparatively modest given the available capacity as occupancy tends to be rather seasonal.

By country of destination, the same top five mentioned earlier in terms of capacity account for over two-thirds of all nights spent in the EU, though in a different order: Spain (16%), France (14%), Italy (14%), Germany (14%) and the United Kingdom (12% in 2012) (table 6.5).

Individual destinations with the highest share of nights spent by international visitors were: Malta (96%), Cyprus (95%), Croatia (93%), Luxemburg (89%), Greece (79%), and Austria (71%). The highest shares of nights spent by domestic visitors were recorded in Romania (81% of total nights), Poland (80%), Germany (79%), Sweden (76%), Finland (72%) and France (69%).

#### Share of establishments, bed-places, guest arrivals and nights by type of establishment in EU, 2016

Source: compiled by World Tourism Organization (UNWTO) based on Eurostat.

# On average 6 nights spent at accommodation establishments per EU inhabitant in 2016

Relative to population, there were some 6 nights spent by visitors at accommodation establishments on average in 2016 for every inhabitant of the European Union. This ratio is also referred to as tourism intensity. International visitors and domestic visitors contributed practically in equal shares with 3 nights per inhabitant each on average. For international nights intensity was highest in Malta with 21 nights per inhabitant, followed by Croatia (19), Cyprus (18), Austria (14), Spain (10) and Greece (9). The ratio for domestic nights per inhabitant varied rather less among destinations and was highest in Sweden, France, Austria, the Netherlands, Germany and Denmark (all 4 nights per inhabitant).

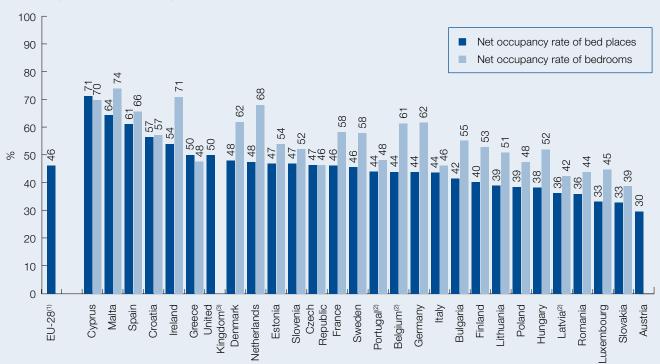

### Growth in nights at EU establishments was mostly driven by international visitors

Total nights spent at EU accommodation establishments increased from 2.4 billion in 2010 to 3.1 billion in 2016 (table 6.4). This represents an increase of 29% this sixyear period, or an average of 4% per year. Growth in this period was driven by international visitors, who spent 1.5 billion nights in 2016, up from 1.0 billion in 2010. At an average of 7% growth a year for this period, nights spent by international visitors increased by some 84 million a year. Nights spent by domestic visitors grew at a slower pace of 2% per year on average, from 1.4 million in 2010 to 1.6 billion in 2016, or 30 million nights a year on average.

#### The occupancy of EU hotels averaged 46% in 2016

The average net occupancy rate of bet places in hotels and similar establishments is obtained by dividing the total number of nights spent by guest in a period by the number of bed-places available for use in that period. For the EU, net occupancy of bed-places was 46% in 2016. Cyprus (71%), Malta (64%) and Spain (61%) reported the highest occupancy rates (table 6.2).

For most of the countries with data available by size of accommodation establishment, occupancy was generally higher the larger the size of hotels. For the EU as a whole, hotels and similar accommodation establishments with 250 or more rooms had the highest occupancy rate (66%), followed by those with 100-249 rooms (59%), those with 25-99 (47%) and those with less than 25 (33%).

Net occupancy rates of bed-places and bedrooms in hotels and similar accommodation establishments, 2016

(3) 2012 data

### Nights spent in accommodation establishments by subnational regions

Beyond individual countries, this analysis can be extended to cover subnational regions in the European Union, as those classified by the Nomenclature of Territorial Units for Statistics (NUTS). NUTS 2 subdivides the economic territory of the EU into 276 basic regions for the application of regional policies.

### Nights spent in accommodation establishments by NUTS 2 regions, 2015

Note: London (UK): NUTS level 1. United Kingdom: 2012. EU-28, Ireland and Greece: estimates.

Source: Eurostat at: http://ec.europa.eu/eurostat/statistics-explained/index.php/Tourism\_statistics\_at\_regional\_level.

The top 20 European NUTS 2 regions of destination account for 36% of all nights spent in European accommodation establishments. Of these NUTS 2 regions, 6 are in Italy, both 5 in Spain and France, 2 in Germany, 1 in Croatia and 1 in Austria.

# Top 20 tourism destinations (NUTS 2 regions) in terms of nights spent in tourist accommodation establishments, 2016

Rank	Region	Country	Total nights spent in the region (million)	Share of non- residents' nights in total nights (%)	Share in all nights spent in EU-28 tourist accommodation establishments (%)
1	Canarias	Spain	102.7	88.9	3.6
2	Cataluña	Spain	79.8	65.4	2.8
3	Jadranska Hrvatska	Croatia	74.2	93.7	2.6

http://ec.europa.eu/eurostat/statistics-explained/index.php/Tourism\_statistics\_-\_annual\_results\_for\_the\_accommodation\_sector.

<sup>1</sup> http://ec.europa.eu/eurostat/statistics-explained/index.php/Tourism\_statistics\_\_annual\_results\_for\_the\_accommodation\_sector

<sup>2</sup> This class includes the provision of accommodation, typically on a daily or weekly basis, principally for short stays by visitors, in self-contained space consisting of complete furnished rooms or areas for living/dining and sleeping, with cooking facilities or fully equipped kitchens. This may take the form of apartments or flats in small free-standing multi-storey buildings or clusters of buildings, or single storey bungalows, chalets, cottages and cabins. Very minimal complementary services, if any, are provided.

<sup>3</sup> The term bed-place applies to a single bed; a double bed is counted as two bed places.

# International visitors to EU destinations by source markets

In most destinations in the world proximity is key when it comes to source markets. In the 28 European Union countries the large majority of international overnight visitors clearly originate from other countries within the Union. Of the 500 million international tourist arrivals welcomed in EU destinations in 2016, 361 million came from EU source markets (72%), while the remaining 139 million originated from extra-EU countries in Europe and from other regions (28%).

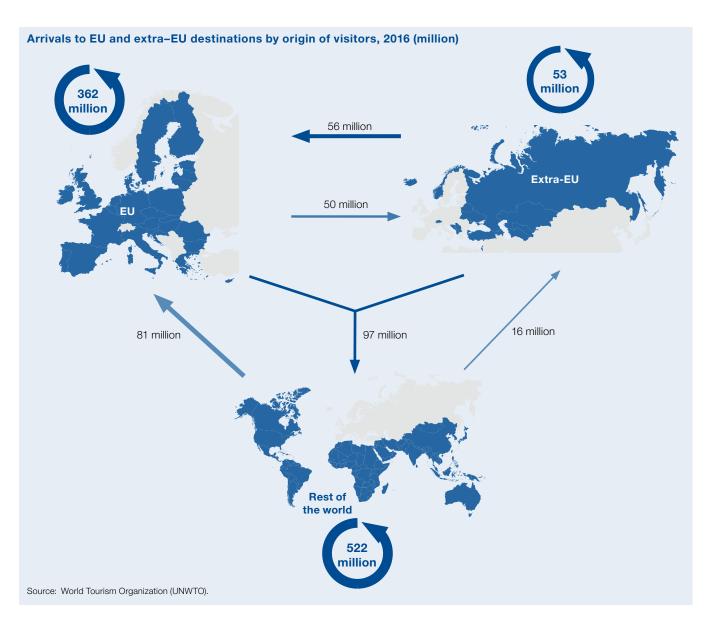

This chapter will further analyse the region of origin of international arrivals to EU destinations. For the group of EU countries this will be done on the basis of the data series on international tourist arrivals (overnight visitors) as compiled by UNWTO and presented in chapters 2 and 3. For individual EU destinations data will be used on arrivals and nights in accommodation establishments as reported through Eurostat. In chapter 8 a detailed analysis will be made of specific major extra-EU and interregional source markets.

# The 28 EU destinations received 137 million arrivals from outside the Union

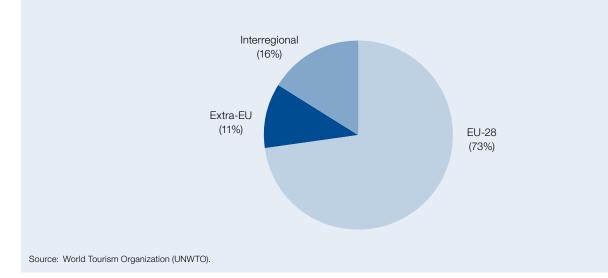

As analysed in chapters 2 and 3, EU destinations reported 500 million international tourist arrivals in 2016. By region of origin according to UNWTO's classification, it is estimated that a total of 417 million arrivals (83%) came from Europe, of which 361 million (72%) from EU source markets and 56 million (11%) from European source markets outside the EU (table 7.1). The remaining

83 million arrivals originated from outside Europe (17%), of which 39 million from the Americas (8%) and 32 million from Asia and the Pacific (7%), while Africa and the Middle East accounted for respectively 6 million and 5 million of EU's arrivals (1% each).

Arrivals in the EU from source markets outside the Union. both extra-EU countries in Europe and markets outside Europe, totalled 139 million in 2016, up from 80 million in 2005. In the last decade, the number of arrivals from outside the EU grew rather faster, fuelled by strong demand from both traditional and emerging markets in Asia, the Middle East, Africa, North America and Latin America. While arrivals from intra-EU source markets grew by 2% a year on average between 2005 and 2016, arrivals from outside markets grew at a rate of 5% a year. Growth has been strongest for arrivals from the Middle East at almost 10% a year on average, but from a comparatively small base volume. Arrivals from Asia and the Pacific and from Africa both grew by 7% a year on average, while arrivals from the Americas grew by 4% a year. Arrivals from extra-EU source markets also grew by 4% a year.

International tourist arrivals to EU destinations by origin of visitors, 2016 (%)

# 413 million nights in accommodation from outside the European Union

For individual EU destinations, comprehensive information on source markets is available on the basis of guest arrivals and nights in accommodation as reported through Eurostat. Note that in accommodation statistics 'guest arrivals' refer to arrivals to an establishment, and not to a country as in the previous section. As one visitor to the country can arrive in more than one establishment, the two series cannot be directly compared. Also, not all visitors in the country will stay in an accommodation establishment; some might use private accommodation instead.

Accommodation establishments in the EU reported 391 million international arrivals in 2016, spending 1.5 billion nights. Of these, 265 million arrivals were from source markets within the EU (68%), 38 million from extra-EU source markets (10%) and 84 million arrivals from outside the region (22%), while for 4 million arrivals the country of origin was not known (table 7.2). Visitors from intra-EU markets spent a total of 1.1 billion nights (71%), from extra-EU markets 137 million (9%) and from interregional markets 276 million (19%), while for 14 million nights the origin of the visitor was unknown.

Visitors from intra-EU source markets spent on average 4 nights per establishment, from extra-EU markets 3.6 nights and from interregional markets 3.3 nights. However, length of stay in the destination is likely to have been longer, as visitors might have travelled around and used more than one establishment on their trip, in particular in the case of visitors from interregional markets.

Taking together extra-EU and interregional source markets, 122 million arrivals to establishments (31%) came from outside the EU, spending 413 million nights (28%). In particular the number of nights from interregional markets has been on the rise since 2012, growing by 13% a year on average.

# Germany, United Kingdom and the Netherlands top three intra-EU markets

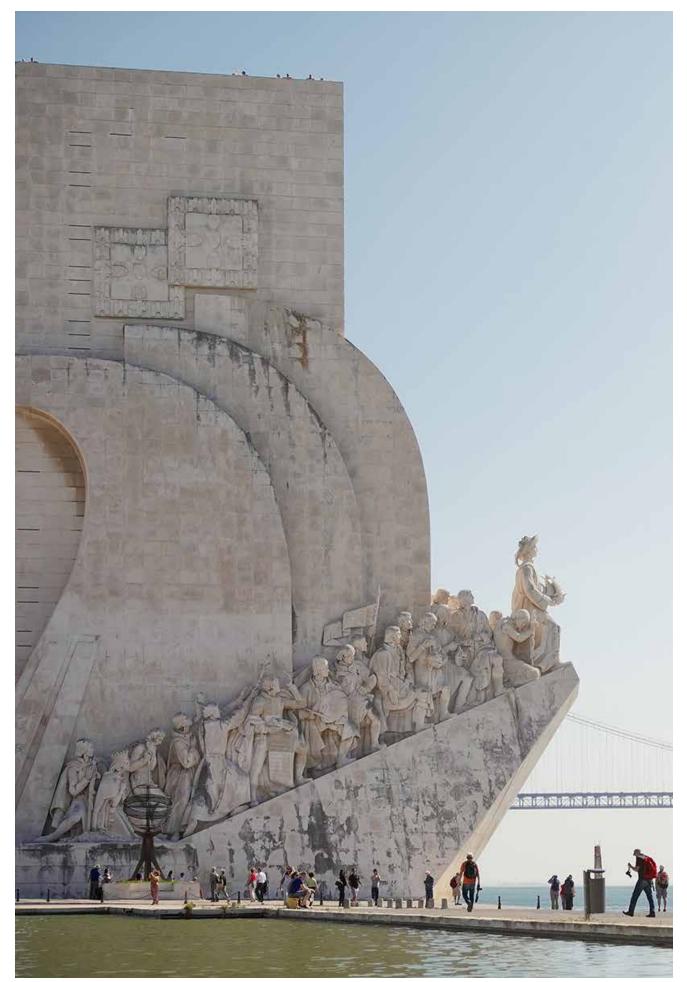

All individual destination countries reported at least half of their nights spent by visitors from EU source markets (Sweden has 48%, but for some 12% of nights the origin of the visitors is missing). Intra-EU source markets are particularly important for Mediterranean destinations Croatia, Malta, Spain and Portugal, and for Western European destinations Luxembourg, Belgium, Austria and the Netherlands. All of these destinations depend for more than 80% of international nights on visitors from intra-EU source markets.

Baltic and Nordic countries Lithuania, Latvia, Estonia, Sweden, Denmark, Finland, and Central Eastern and South Eastern European countries Cyprus, Bulgaria, Greece and Poland, all depend comparatively strongly – for more than 15% of international nights – on visitors from extra-EU source markets, in particular from Norway and the Russian Federation.

Ireland, Romania, Germany, Czech Republic, France and Finland all depend comparatively strongly – for more than 20% of international nights – on visitors from interregional markets.

By individual country of origin, the top three countries of origin for the group of 28 EU destinations were Germany with 20% of nights spent by international guests in accommodation establishments, the United Kingdom (13%) and the Netherlands (7%) (table 7.3).

For individual countries of destination at least two of the three main source markets are within the EU with few exceptions. German visitors were the main source of nights spent at accommodation establishments in 9 out of the 28 countries of the EU, while in the remaining 18 destinations (excluding Germany) they were the second or third source of nights. With regard to source markets outside the EU, the United States is the first market for the United Kingdom and Ireland. The Russian Federation is the first market for Latvia and Finland, while Norway is the first market for Sweden.

137

As analysed in the previous chapter, 413 million nights were spent in EU accommodation establishments by visitors from outside the EU. Extra-EU source markets (in Europe but not belonging to the EU) account for 137 million nights and those outside Europe (interregional) for 276 million.

This chapter takes a closer look at the major source markets outside the European Union that accounted for guest arrivals to, and nights spent in, EU accommodation establishments. This is a continuation of the analysis in the previous chapter and is based on the same dataset on the use of accommodation establishments aggregated and disseminated by Eurostat.

#### Major source markets outside of the EU

Outside the European Union, two main categories of source markets can be identified: those within Europe but not belonging to the European Union (extra-EU source markets) and those from outside Europe (interregional source markets). Visitors from extra-EU markets spent 137 million nights in EU accommodation establishments in 2016, while visitors from other world regions spent 276 million nights. Of this interregional total, visitors from Asia and the Pacific (including Oceania and the Middle East) account for 138 million nights, those from the Americas for 120 million and those from Africa for 18 million.

It is important to note that the world regions referred to throughout this chapter follow Eurostat's classification and differ from UNWTO's regions of the world.<sup>1</sup> When referring to Asia and the Pacific, Asia and Oceania are presented together as in UNWTO's grouping, but unlike UNWTO's grouping the region also includes all countries of the Middle East and a number of countries of the Commonwealth of Independent States (CIS).

Extra-EU source markets account for 137 million

In the period 2012-2016 growth was substantial for interregional markets, increasing at a rate of 26 million nights a year on average (+13% a year). By contrast, demand from extra-EU markets stagnated, weighed down by the decline in the number of nights from the Russian Federation.

Next in this chapter, major individual source markets will be analysed for the group of extra-EU countries, as well as for Asia and the Pacific, the Americas and Africa. The United States remains the undisputed top source market outside the European Union with 74 million nights spent at EU accommodation establishments in 2016. Extra-EU markets Switzerland and the Russian Federation follow with 44 million and 32 million nights respectively. With 25 million nights in 2016 China is the fourth largest market and the fastest growing, having doubled the number of nights spent since 2012.

By destination country, it is worth noting that Italy is one of the top tourism destinations – measured in nights – for source markets outside the EU analysed in this chapter, including all markets in Asia and the Pacific, the Americas and Africa, as well as for three of the five extra-EU markets (Switzerland, Turkey and Ukraine). The United Kingdom is also a major destination for most source markets outside the EU, but unfortunately no recent data is available.

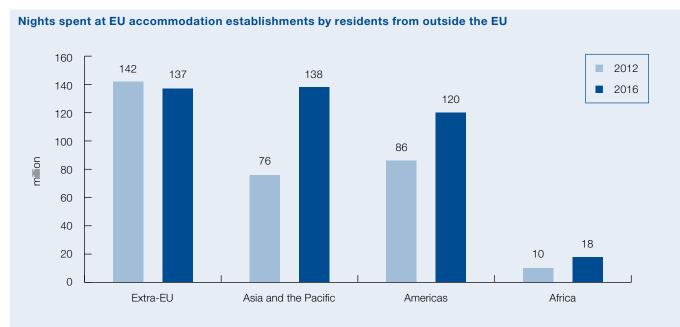

### Switzerland and the Russian Federation lead among extra-EU source markets

In 2016, visitors from extra-EU source markets spent 137 million nights at EU accommodation establishments (table 8.1). With 38 million guest arrivals at EU establishments, the average length of stay for this group was 4 nights per establishment. Nights spent by this group of countries decreased an average 1% per year in the period 2012-2016, with mixed trends among source markets. On one hand, advanced economy source markets in Northern and Western Europe (predominantly Switzerland and Norway) recorded robust growth during this period. By contrast, demand from emerging economy source markets in Central and Eastern Europe declined considerably. These include the Russian Federation (-9% per year) and a number of countries grouped in the category of 'other extra-EU' (-7%), such as Turkey and Belarus.

Switzerland (including Liechtenstein) is currently the top extra-EU source market for EU destinations. Its geographical location, in the heart of Western Europe and surrounded by four EU countries, makes it a natural source of tourism for European Union destinations. Nights spent by Swiss travellers at EU accommodation establishments reached 44 million in 2016, up from 34 million nights in 2012 (+7% growth a year on average). With 14 million Swiss guest arrivals in establishments in 2016, this is equivalent to an average 3 nights per establishment. The main destinations for Swiss visitors are neighbouring countries Italy, Germany and France, as well as Spain. Visitors from Switzerland spent 10.5 million nights in Italian accommodation establishments, 6.5 million nights in Germany, 5.7 million in France and 5.3 million in Spain.

Visitors from Norway spent 23 million nights in 2016, with 6 million guest arrivals at EU accommodation establishments, which results in an average 4 nights per arrival per establishment. Between 2012 and 2016, nights spent by Norwegians grew at an annual average rate of 1%. Their preferred destination within the EU is Spain, where they spent 6 million nights in 2016, followed by their neighbour Sweden with 3 million nights and Greece with 2 million nights.

By contrast, the Russian Federation, traditionally the top extra-EU source market for EU destinations, has receded to second place (behind Switzerland) as a result of the substantial decrease in nights this period, from 47 million in 2012 to 32 million in 2016 (-9% a year on average). Weaker outbound tourism from Russia Federation was a consequence of their economic crisis, following the decline in commodity prices and the depreciation of the Russian rouble. The top EU destination for Russians is Greece, where they spent 6 million nights in 2016 (-3% annual average in 2012-2016). In Spain they spent 5 million nights (-13% per year) and in Italy 4 million nights

Source: compiled by World Tourism Organization (UNWTO) based on Eurostat.

(-10% per year). In Croatia, Russian visitors spent 738 thousand nights with an average length of stay of 7 nights per arrival at each accommodation establishment.

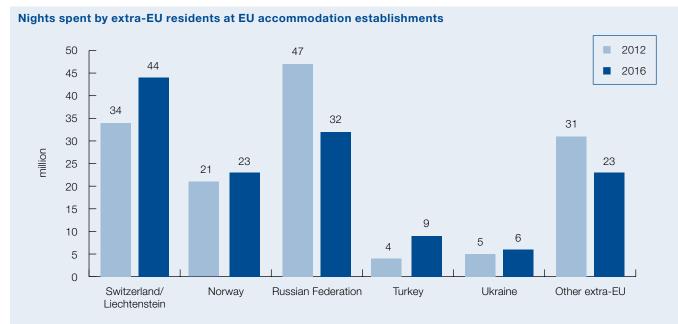

Turkey accounted for 9 million nights and 3 million guest arrivals at EU accommodation establishments in 2016, corresponding to 3 nights on average per establishment. Although from a modest base volume, nights spent by Turkish visitors have recorded fast growth this fouryear period (19% a year on average between 2012 and 2016). Italy is the preferred destination for Turkish travellers, where they spent 1 million nights in 2016 (+12% in 2012-2016). Germany (+9%) and Greece (+20%) reported around 800 thousand nights each, followed by France (+14%) and Spain (+8%), with approximately 600 thousand nights.

Ukraine accounted for 6 million nights and 2 million guest arrivals at EU accommodation establishments in 2016 (at an average of 3 nights per arrival per establishment). Nights spent by visitors from Ukraine grew at a rate of 5% a year on average between 2012 and 2016. The preferred destination within the EU is neighbouring country Poland, where visitors from Ukraine spent 924 thousand nights in 2016. Italy is the second most visited destination with 853 thousand nights spent, followed by Spain with 557 thousand nights and Bulgaria and Croatia with around 400 thousand nights each.

# Asia and the Pacific is the EU's largest tourism source region outside Europe

Visitors from Asia and the Pacific (including Oceania and the Middle East) spent 138 million nights in accommodation establishments in the EU (table 8.2). With 42 million Asian guest arrivals in EU accommodation establishments, this corresponds to an average 3 nights per establishment. Nights spent by Asian visitors grew an average 16% per year in the period 2012-2016, outpacing the growth of other regions and overtaking the Americas for the first time. By individual Asian source market, China leads with 25 million nights spent in EU establishments, followed by Australia (22 million), Japan (10 million) and the Republic of Korea (8 million).

China (including Hong Kong) has been the top market from Asia and the Pacific in nights spent in EU destinations since 2012, when it overtook Japan. Guest arrivals from China in EU accommodation establishments reached over 10 million in 2016, staying an average of 2.4 nights per establishment. The total number of nights spent doubled in four years' time to 25 million in 2016, up from 12 million in 2012. China continues to be one of the fastest growing markets at 19% a year on average in the period 2012-2016, equivalent to some 3 million additional nights a year. Italy is the top EU destination for Chinese visitors, with 4 million nights spent in 2016 (average 16% growth per year in 2012-2016). The United Kingdom is also a major destination with 3.4 million nights in 2012, though no data is available after 2012. France with 3.3

Source: compiled by World Tourism Organization (UNWTO) based on Eurostat.

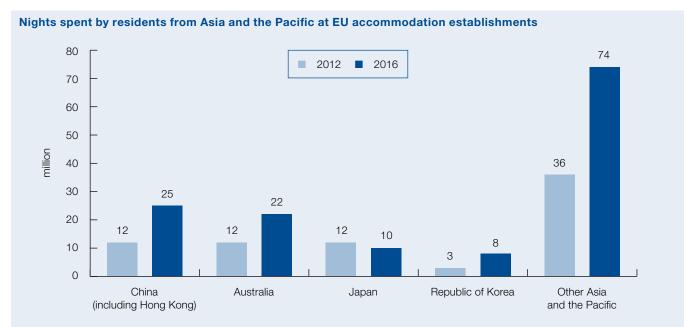

million nights spent (+17% a year), Germany with 2.6 million nights (+13% a year), Spain with 1.8 million nights (+27% a year) and Austria with 1 million nights (+19% a year) are also beloved by Chinese visitors.

Australia is the EU's second largest source market in Asia and the Pacific after overtaking Japan in 2013. Australian visitors spent 22 million nights at EU accommodation establishments in 2016, with growth of 16% a year on average in the period 2012-2016. The United Kingdom is likely to remain the top destination for visitors from Australia, with 4.6 million nights in 2012, though more recent data is missing. Italy is the next most popular EU destination with 2.4 million nights in 2016. This is partly a reflection of Italy being the third major European country of descent for Australians after the United Kingdom and Ireland, with almost a million Australians identifying themselves as having Italian ancestry. France reported 1.0 million nights from Australian visitors. Spain 867 thousand, Germany 754 thousand, Greece 589 thousand, Ireland 439 thousand and Croatia 397 thousand.

Japan was traditionally the largest Asian source market for the EU, but following slower growth in the last decades, it is now the third largest. The number of nights spent by Japanese visitors in the EU decreased by an average 5% per year in 2012-2016, to 10 million in 2016. Italy is also the top destination for Japanese visitors despite the decline in the last four years to 1.9 million nights in 2016 (-9% per year in 2012-2016). France, Spain and Germany are major destinations as well, each reporting slightly over 1 million nights. All these destinations recorded a decline in Japanese nights at accommodation establishments except for Spain, where nights remained flat this fouryear period.

By contrast, the Republic of Korea has shown the fastest growth in the last few years and has become a major source market for EU destinations. Korean visitors spent 7.6 million nights in EU accommodation establishments in 2016, up from 3.2 million in 2012, corresponding to a remarkable growth of 24% a year on average in these four years. Similar to other Asian markets, Italy is the largest destination for Korean visitors, who spent 1.6 million nights in Italian accommodation establishments in 2016. This number grew at the same fast rate as the number of nights spent by Koreans in EU destinations overall. Spain is the second major destination in the EU for Koreans, with 1.0 million nights spent in 2016, followed by Germany with 614 thousand, France with 461 thousand nights and Croatia with 447 thousand.

Visitors from other markets grouped together under 'other Asia and the Pacific' represent another 74 million nights spent at EU accommodation establishments in 2016. This category comprises many other important source markets in Asia, among which India, plus all the Middle Eastern markets. As it is a rather large and fast growing group, a further breakdown into specific markets by Eurostat would be desirable, so these could be analysed separately.

Source: compiled by World Tourism Organization (UNWTO) based on Eurostat.

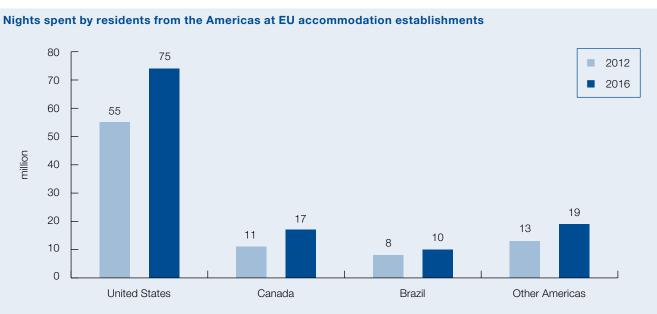

### The United States remains the undisputed top source market outside the EU

In 2016, visitors from the Americas spent 120 million nights in EU accommodation establishments (table 8.3). With 39 million guest arrivals at establishments, the average stay was 3 nights per establishment. In the period 2012-2016, nights spent by visitors from the Americas grew at a robust rate of 9% a year on average.

The United States has been the major source market outside Europe for many years and continues to lead by number of nights spent. EU accommodation establishments welcomed 25 million guest arrivals from the United States in 2016, spending 74 million nights or 3 nights on average. Nights grew by 8% a year on average between 2012 and 2016. The United Kingdom has traditionally been the number one destination for US visitors to the EU, with 14 million nights recorded in 2012, though more recent information is not available. In 2016, visitors from United States spent 11 million nights in Italy and 8 million nights in France. Nights in Spain and Germany reached 6 million in each destination, while Ireland reported 4 million nights.

destinations received around 5 million guest EU arrivals from Canada, who spent 17 million nights in accommodation establishments in 2016 (4 nights on average per establishment). In the period 2012-2016, nights grew at an average of 12% a year. The destination preference of Canadian visitors is rather similar to those of the United States, with the United Kingdom as the traditional top destination in the EU with 3.1 million nights spent in 2012, though more recent information is missing. Italy stood out with Canadian visitors spending 2.0 million nights at accommodation establishments in 2016. Spain accounted for 1.3 million nights and France for 1.1 million. Nights spent in Ireland reached 729 thousand and in Germany 620 thousand.

Approximately 3 million guests from Brazil spent 10 million nights in 2016 at accommodation establishments in EU destinations (3 nights per establishment on average). Nights spent by Brazilian visitors grew at an annual average rate of 7% between 2012 and 2016. Brazilians spent more nights in Italy, with 1.9 million nights reported in 2016. In Portugal, a familiar destination for Brazilians due to cultural ties and the language, nights reached 1.6 million after growing an average 9% a year from 2012 to 2016. Spain and France both accounted for around 1 million nights, while Brazilian visitors spent 665 thousand nights in Germany.

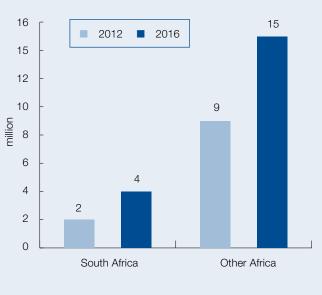

Source: compiled by World Tourism Organization (UNWTO) based on Eurostat.

# African source markets account for 18 million nights spent in the EU

In 2016, visitors from Africa accounted for 18 million nights and 4 million guest arrivals at EU accommodation establishments, with an average length of stay of 5 nights per establishment (table 8.4). Although the base volume is comparatively smaller than in other regions of the world, nights spent by African visitors almost doubled between 2012 and 2016, growing at a robust rate of 16% a year on average.

South Africa is the major source market in the region with nights spent at EU accommodation establishments reaching 3.5 million in 2016, up from 1.6 million in 2012 (+21% a year on average in 2012-2016). The United Kingdom has traditionally been the first destination for South African visitors to the EU, with 644 thousand nights reported in 2012, though more recent information is not available. Similarly to other world regions, four destinations stand out as the preferred by South Africans in 2016. Italy leads with 281 thousand nights, followed by Germany with 177 thousand, Spain with 171 thousand and France with 122 thousand nights.

### Nights spent by residents from Africa at EU accommodation establishments

Source: compiled by World Tourism Organization (UNWTO) based on Eurostat.

See for the UNWTO classification the tables by region in the UNWTO Tourism Highlights at http://mkt.unwto.org/highlights. For Eurostat see pages 124-127 of the Methodological manual for tourism statistics at: http://ec.europa.eu/eurostat/en/web/products-manuals-and-guidelines/-/KS-GQ-13-007

Over the past century, tourism has experienced continued expansion and diversification to become one of the largest and fastest-growing economic sectors in the world. It is a key driver of socio-economic progress through the creation of jobs and enterprises, export revenues, and infrastructure development. Tourism is estimated to account for 10% of the world's gross domestic product (of which 3% direct, 5% indirect and 2% induced contribution) and one in ten jobs globally<sup>1</sup>.

Also in the EU economy, tourism is a crucial economic engine and job creator. The EU has a well-developed tourism sector that caters for substantial demand, both domestic and international, with the latter representing 40% of the world's international tourist arrivals and 31% of international receipts. According to data from Eurostat, EU tourism industries comprised 2.3 million enterprises in 2014, most of them small and mediumsized enterprises (SMEs). Enterprises in industries with tourism-related activities employed some 12 million people in the European Union, equivalent to 9% of total employment in the non-financial business economy<sup>2</sup>.

Tourism furthermore contributes significantly to the balance of payments, accounting for 6% of the EU's overall exports of goods and services and 22% of its services exports in 2016.

This chapter explores the contribution of tourism to the EU economy, specifically to its gross domestic product (GDP), employment and exports, according to data from Eurostat, the European Commission (EC), the Organi-

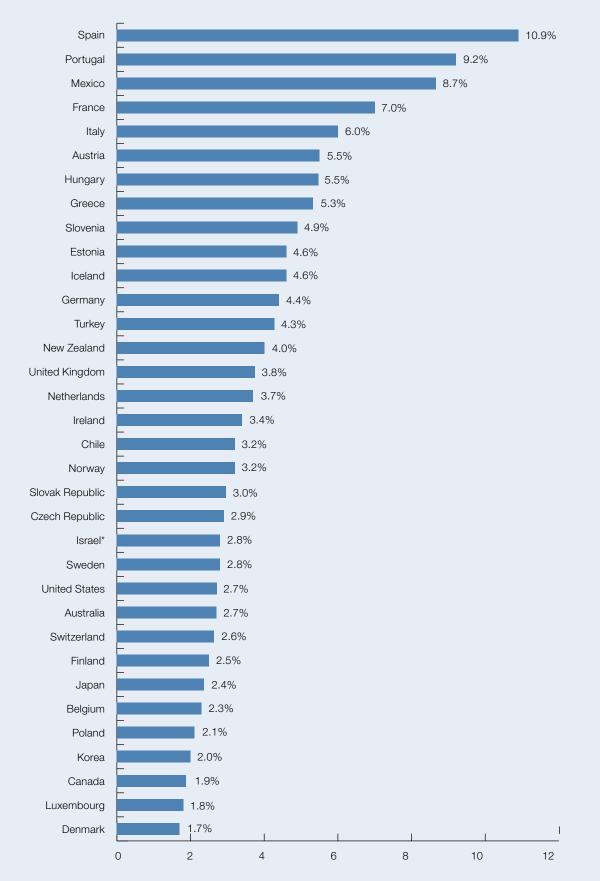

zation of Economic Co-operation and Development (OECD) and UNWTO. Note that given the variety of sources, available data for the various indicators may correspond to different years.

#### **Tourism's contribution to Gross Domestic Product**

This section looks at the economic contribution of tourism to the GDP of the 28 countries in the European Union, through data generated from the Tourism Satellite Accounts (TSA). The TSA is a standard statistical framework and the main tool for the economic measurement of tourism comparable to other sectors of the economy. Although TSA data provides a useful insight on the contribution of tourism, it is still fragmented and not sufficiently harmonised across countries, so comparisons must be interpreted with caution.

In a 2010 strategy paper on tourism, the European Commission indicates that the tourism sector directly generated over 5% of the EU GDP<sup>3</sup>. Taking into account other industries linked to it, such as distribution, construction and cultural and creative industries, tourism's contribution to the economy represents over 10% of the EU GDP.

According to the EC, tourism is the third largest socioeconomic activity in the European Union (after the trade, distribution and construction sectors), and has an overall positive impact on economic growth and employment. Tourism also contributes to the development of European

#### Direct contribution of tourism to OECD countries, as percentage of GDP, 2014 or latest year available

Source: compiled by World Tourism Organization (UNWTO) based on OECD.

regions and, if sustainable, helps to preserve and enhance cultural and natural heritage.

In a 2016 report by the OECD also using the TSA framework, tourism is estimated to directly contribute to 4% of GDP in the group of OECD Member States<sup>4</sup>. The report reveals significant variation in the weight of tourism in the economies of individual countries with available data (table 9.1).

Among the 28 countries of the European Union, the direct contribution of tourism is highest in Spain, estimated at 11% of GDP, and Portugal, about 9%, followed by France (7%) and Italy (6%). It is above 5% in Austria, Hungary and Greece and about 4% in Germany, the United Kingdom and the Netherlands. The contribution is smallest in Belgium, Poland and Denmark, where tourism is estimated to represent around 2% of their GDP. The share of tourism in Southern and Mediterranean European economies is clearly higher, while Northern and Western European economies rely comparatively less on this sector.

# Tourism industries employ 12 million people in the European Union

Tourism is a labour-intensive sector that has become a major source of job creation at all skill levels. Worldwide, tourism is estimated to account for one in ten jobs, including direct, indirect and induced jobs as referenced at the beginning of this chapter. Tourism has a significant multiplier effect, creating employment in related sectors such as agriculture, construction, maintenance, retail, handicrafts or financial services. According to UNWTO and the International Labour Organization (2014), one job in the core tourism industry of accommodation creates about one and a half additional (indirect) jobs in the tourism-related economy<sup>5</sup>.

In the European Union, tourism industries also sustain a substantial number of jobs and offer plenty of opportunities for entrepreneurs. The following overview on tourism employment in EU countries is primarily based on the most recent data provided by Eurostat<sup>6</sup>. According to this data, there were 2.3 million enterprises in the EU (as of 2014) that supplied goods and services mainly or partially to tourists. This is equivalent to one in ten enterprises in the EU non-financial business economy, which includes the sectors of industry, construction and distributive trades and services (see table 9.2)

#### **About the Tourism Satellite Accounts**

The Tourism Satellite Accounts (TSA) is a standard statistical framework and the main tool for the economic measurement of tourism. It has been developed by the World Tourism Organization (UNWTO), the Organisation for Economic Co-operation and Development (OECD), the Statistical Office of the European Communities (Eurostat) and the United Nations Statistics Division (UNSD).

The Tourism Satellite Account: Recommended Methodological Framework 2008 (also known as the TSA: RMF 2008) provides the common conceptual framework for constructing a TSA. It adopts the basic system of concepts, classifications, definitions, tables and aggregates of the System of National Accounts 2008 (SNA 2008), the international standard for a systematic summary of national economic activity, from a functional perspective.

The TSA framework focuses on the description and measurement of tourism in its different forms (inbound, domestic and outbound). It highlights the relationship between consumption by visitors and the supply of goods and services in the economy, principally those from the tourism industries. With this instrument, it is possible to estimate tourism GDP, to establish the direct contribution of tourism to the economy and to develop more complex and elaborated schemes building on the intrinsic relationship of the Tourism Satellite Account with the System of National Accounts and the balance of payments. The TSA incorporates a set of 10 summary tables, each with their underlying data:

- Inbound, domestic tourism and outbound tourism expenditure;
- Internal tourism expenditure;
- Production accounts of tourism industries;
- The Gross Value Added (GVA) and Gross Domestic Product (GDP) attributable to tourism;
- Employment;
- Investment;
- Government consumption; and
- Non-monetary indicators.

#### For more information on the TSA

International Recommendations for Tourism Statistics (IRTS 2008): http://statistics.unwto.org/content/irts-2008

The conceptual framework for TSA - Tourism Satellite Account: Recommended Methodological Framework (TSA:RMF): http://statistics.unwto.org/content/tsarmf2008

TSA Data Around the World – Worldwide summary: http://statistics.unwto.org/content/tsadata

Eurostat, Tourism Satellite Accounts in Europe: http://ec.europa.eu/eurostat/web/products-statistical-reports/-/KS-FT-17-002 Enterprises in tourism industries employed some 12 million people in the European Union in 2014, equivalent to 9% of total employment in the non-financial business economy<sup>6</sup>. More specifically in the services sector in the European Union, tourism industries accounted for 22% of workers.

By tourism industry in the EU, nearly 7 million of these 12 million people are employed in the food and beverage industry, 2.4 million in the accommodation sector (not including real estate) and 1.9 million in transport. Travel agencies and tour operators account for nearly half a million employed persons and car and other rentals about 0.2 million. The three industries that rely almost entirely on tourism – accommodation, travel agencies/ tour operators and air transport – employ 3.3 million people in the EU.

### Tourism is a major economic activity in most countries of the European Union

For the 28 EU countries as a group, tourism industries represent 9% of persons employed in the total non-financial business economy. In Member States for which data are available, tourism ranges from 4% to 13% of persons employed. Spain and Austria have the highest share of employment (13% each), followed by Croatia and the United Kingdom (both 12%) (table 9.3). In absolute numbers, the United Kingdom and Germany had the highest employment in the tourism industries (2.2 million people each), followed by Italy (1.4 million) and Spain (1.3 million).

Information on tourism-related employment is also provided by the Tourism Satellite Accounts (TSA), though this is somewhat limited in terms of comparability and geographical coverage. Among other indicators, the TSA in Europe provides data on number of jobs in tourism and non-tourism industries (but directly connected to tourism) for nine EU countries (table 7 of the TSA: Employment in the tourism industries)<sup>7</sup>. Of those countries with available data, Spain leads with 2.3 million tourism-related jobs (2011 data). This represents 48% of the total 4.8 million jobs in all nine reporting countries. For the rest of EU countries information is not available.

#### **Employment in tourism industries shows resilience**

Tourism is one of the most dynamic and resilient economic sectors and has a strong capacity to generate jobs, particularly for women and youth, and to enhance the role of SMEs in the tourism value chain. Importantly, tourism has a higher share of women employees and entrepreneurs than the economy as a whole and creates significant employment opportunities for young people, thus firmly contributing to reducing youth unemployment.

In times of economic difficulties, employment in tourism tends to be less affected and to recover more quickly than other economic sectors (see endnote 5). This has been the case for the European Union after the 2009 financial and economic crisis. Although the global economic crisis caused a drop in employment around the world, this did not occur in the services sector according to Eurostat. This includes the core tourism industry of accommodation, where employment grew at an average annual rate of 0.9% since 2008. This shows the tourism sector's resilience at times of economic turmoil, when other sectors were harder hit.

### Seasonality in tourism activities is only partly reflected in tourism employment

Tourism demand varies considerably throughout the year. Occupancy rates at accommodation establishments are higher in the summer months than in any other period of the year. In the EU, the average number of nights spent in accommodation establishments is 2.9 times higher in the third quarter of the year (the peak quarter) than in the first quarter (the lowest quarter)<sup>8</sup>.

These seasonal fluctuations only partly translate into seasonal variations in employment. In the peak quarter of 2014, employment in tourism was only 1.2 times higher than in the lowest quarter. This affects the accommodation sector the most, where employment was also 1.2 times higher in the peak quarter than in the lowest quarter. In air transport it was 1.1 times higher and in travel agencies it was about the same.

Relative to the annual average, employment in the peak quarter was 9% higher overall. In the accommodation sector it was 11% higher, in air transport 5% higher and in travel agencies and tour operators 2.5% higher.

#### Tourism creates jobs for women and youth

The tourism sector is a major employer of women and attracts a young labour force. Almost 6 out of 10 persons employed by the tourism industries in the European Union are women. Compared with the total non-financial business economy, where 36% of people employed are female, the labour force of the tourism industries includes more female workers (58%) than male workers.

With 13% of workers aged 15 to 24, compared with 9% for services or for the non-financial business economy, the tourism industries have a particularly young labour force, as these industries can make it easy to enter the job market.

For a comprehensive analysis of tourism employment in the European Union, including the contribution of tourism to the labour market, the characteristics of jobs in tourism industries, the participation in the tourism sector of women and youth, seasonality and regional issues, among other topics, see Eurostat Statistics Explained at: http://ec.europa.eu/eurostat/statistics-explained/index. php/Tourism\_industries\_-\_employment.

### Tourism accounts for 6% of total exports and 22% of services exports in the EU

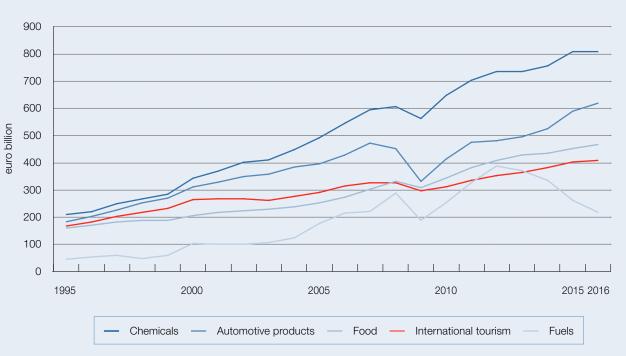

In macro-economic terms, expenditure by international visitors is recorded as exports for the destination country and as imports for the visitor's country of residence. International tourism contributes substantially to the Balance of Payments (BOP) of many countries around the world and is a major source of foreign revenues. Tourism exports are composed of international tourism receipts earned in the destinations and of exports generated through international passenger transport services rendered to non-residents. These items are reported in the BOP, as 'travel credit' and 'passenger transport credit' respectively (see explanation in box in page 59).

In 2016, international tourism receipts reached euro 1,106 billion and passenger transport euro 196 billion, putting total export earnings from international tourism at euro 1,303 billion globally. This represents 7% of overall exports in goods and services and 30% of the world's services exports alone (table 9.4). As a worldwide export category, tourism ranks third after chemicals and fuels, and ahead of automotive products and food (table 9.4). In many countries tourism is the top export category. Tourism is increasingly an essential component of export diversification, both for emerging

### The importance of the quality and comparability of employment data to effectively measure the economic impact of tourism

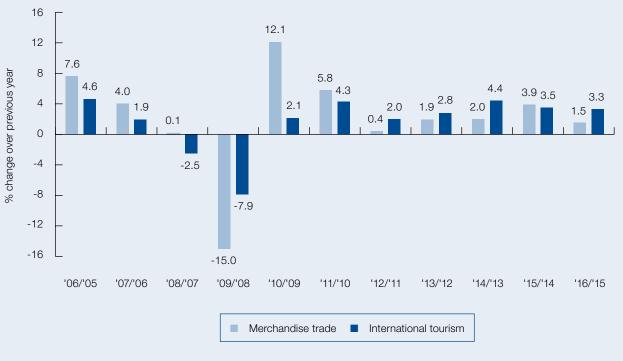

Tourism is a people's sector in all its aspects and dimensions. However, data on tourism-related to employment is still fragmented, lacks quality and international comparability. This is the case not only at the international level, but also at the national level where different methods and sources often result in different figures and results. Enhancing the quality and comparability of tourism employment statistics would significantly improve the monitoring of tourism labour markets and the promotion of productive activities, as well as the effective use of qualified labour, the principal factor in ensuring sustainable tourism development and its contribution to economic growth and employment. Statistical data are indispensable tools for sound evidence-based decision-making, planning, implementation and monitoring of any policies and programmes. Consequently, the level of detail and the reliability of data, as well as of its interpretation and use, have a direct impact on the effectiveness of such policies and programmes. Among these are tourism statistics and tourism employment-related data, which are fundamental to understand tourism labour markets and devise adequate job creation policies, promote employment opportunities, plan workforce needs and develop human resources through education and relevant training.

UNWTO and ILO (2014), Measuring Employment in the Tourism Industries – Guide with Best Practices, available at: http://www.e-unwto.org/doi/book/10.18111/9789284416158

International tourism (BOP Travel & Passenger Transport) and other export categories, EU

Source: World Tourism Organization (UNWTO) and World Trade Organization (WTO).

### EU international tourism (BOP Travel & Passenger Transport) and merchandise trade

Source: World Tourism Organization (UNWTO) and World Trade Organization (WTO).

and advanced economies, and often shows a strong capacity to compensate for weaker export revenues in many commodity and oil exporting countries.

In the European Union, international tourism represents a major source of export revenue for many economies. In 2016, the EU earned euro 342 billion in international tourism receipts, or 31% of the world's tourism earnings, after growing 3% in real terms from the previous year. International passenger transport (rendered to nonresidents) is estimated to have generated another euro 67 billion, resulting in total export earnings from international tourism of euro 409 billion. This represents 6% of its overall exports of goods and services, and 22% of the EU's services exports.

Tourism ranks as fourth largest export category in the EU, after chemicals, automotive products and food, and ahead of fuels.

International tourism has generally grown faster than merchandise trade in the EU and has shown more resilience during economic downturns, particularly in crisis year 2009. It has also demonstrated a strong capacity to compensate for weaker export revenues from other goods or services.

### Southern and Mediterranean destinations enjoy the highest shares of export earnings from tourism

The percentage of tourism (BOP Travel and Passenger Transport) in overall exports is highest in EU destinations in Southern and Mediterranean Europe. Croatia (36%), Greece (29%), Cyprus (22%) and Portugal (20%) boast the largest shares of tourism earnings relative to exports. The lowest are found in the Western European destinations of the Netherlands (2%) and Belgium (3%).

Relative to services exports specifically, the share of international tourism is also highest in Southern and Mediterranean destinations, namely in Croatia (73%), Greece (59%) and Portugal (58%), where tourism represents over half their services exports. It is also substantial in the Central and Eastern European destinations of Bulgaria (49%), Slovenia (36%), Slovakia (34%), Estonia (31%) and the Czech Republic (30%). In Austria (Western Europe), tourism accounts for 35% of services exports.

### EU boasts a surplus of euro 27 billion in the travel trade balance

International tourism receipts are a services export for a destination, while tourism expenditure is a services import for the source country. As such, international tourism can generate a tourism trade surplus (when receipts exceed expenditure), or a deficit (vice versa) in the Balance of Payments (BOP) of countries.

Due to their high tourism earnings and comparatively low expenditure, some countries have important travel trade surpluses in their travel trade balance. This is the case of several destinations in Europe as well as the EU as a whole. In 2016 the EU recorded a travel trade surplus of euro 27 billion, resulting from international tourism receipts of euro 342 billion and expenditure of euro 315 billion (table 9.6). Travel trade surpluses were recorded in the group of EU countries in Southern and Mediterranean Europe (euro 83 billion) and Central and Eastern Europe (euro 10 billion). By contrast, EU countries in Northern Europe (euro -28 billion) and Western Europe (euro -38 billion) recorded deficits in the travel trade balance.

#### International tourism as export earnings

Spending by international visitors is recorded as exports in the destination country and as imports in the visitor's country of residence. In the Balance of Payments (BOP), receipts from inbound tourism are reported as 'travel credit' under the services balance, while expenditure on outbound tourism is recorded as 'travel debit'. Tourism also generates export earnings through international passenger transport, which is reported separately under 'passenger transport credit' in the services section of the Balance of Payments. Passenger services are recorded as export earnings for the country where the transport companies are registered when the service is provided to non-residents.

# Highest surplus in Southern and Mediterranean destinations Spain, Italy and Greece

Of EU countries, Spain has the largest tourism trade surplus (euro 37 billion) followed by Italy (euro 14 billion) and Greece (euro 11 billion). This explains the favorable travel balance of EU Southern and Mediterranean Europe. Austria (Western Europe) has the fourth largest surplus (euro 9 billion) and Croatia (Southern and Mediterranean Europe) the fifth largest (euro 8 billion). These and other countries with travel surpluses are net tourism earners, meaning they earn more than they spend on international tourism.

As opposed to this, some countries have a deficit on their travel trade balance, mostly in Northern and Western Europe. Germany (euro -38 billion) and the United Kingdom (euro -21 billion) have the largest deficits, followed by Belgium (euro -7 billion) and the Netherlands (euro -4 billion). Other Western and Northern European markets have smaller deficits. These markets are net spenders on international tourism, meaning higher expenditure than earnings in international tourism.

# Transfer of international tourism from north and west to south and east

Differences in the travel trade balance between countries are a reflection of net travel flows within a region. In the EU, Western Europe and Northern Europe are net spenders on international tourism, while Southern and Mediterranean Europe and to a lesser extent Central and Eastern Europe are net earners. This suggests a net flow of visitors and expenditure from the former to the latter, in a broad north and west to south and east transfer of tourism.

This analysis should be read with caution as travel flows occur in many directions and both ways, both between countries within the European Union and to and from countries outside the EU. Net tourism flows do not imply that travel occurs only one way (outbound or inbound), but simply that one flow is larger than the other. Net spending markets are also large earners themselves. For instance, Western Europe accounts for 34% of the tourism receipts in the EU, only moderately behind Southern and Mediterranean Europe (39%). The same applies to net-earning markets; they spend considerably on outbound tourism as well. Finally, travel flows also occur to and from countries outside the EU, meaning that net spending or net earning positions are influenced by extra-EU and interregional markets as well. Still, this analysis helps understand the broad transfer of international tourism within the EU and specifically the net transfer of tourism spending.

# EU tourism trends long-term outlook

UNWTO projected international arrivals in the European Union to grow at a rate of 1.5% a year between 2010 and 2030, as reported in *International tourism trends in EU-28 member states, current situation and forecasts for 2020-2025-2030,* published in 2014<sup>1</sup>. The work was built on a set of base projections for 2030 presented in the UNWTO long-term outlook *Tourism Towards 2030,* published in 2011<sup>2</sup>.

The 2030 base projections were made in 2011, with 2010 as the base year, right after the economic and financial crisis of 2009, and are therefore rather cautious. In the six years that have passed since, international arrivals have grown faster than expected, particularly in Europe. This is attributable to a stronger recovery after the 2009 crisis and a faster than anticipated growth of tourism demand from many source markets.

This chapter revisits the international tourism projections for the world and the EU in the period 2010-2030, as presented in the mentioned reports. The growth projections below are the result of a quantitative forecast model developed by UNWTO, using international tourist arrivals reported by destination countries as a basis. As in any forecasting exercise, results should not be interpreted as precise predictions, but as likely outcomes indicating the direction and magnitude of change.

#### **Global growth projections**

+2.3%

a year

EU markets

International tourist arrivals worldwide were projected to increase by an average of 3.3% a year over the period 2010 to 2030, as reported in *Tourism Towards 2030* (table 10.1). The rate of growth is expected to gradually decrease over time, from 3.8% in the first ten years to 2.9% in the last ten. This is calculated on top of growing base numbers, so in absolute terms arrivals will increase by some 44 million a year through 2030, compared with an average of 28 million a year in the period 1995-2010. At the projected rate of growth, international tourist arrivals worldwide are expected to reach 1.4 billion by 2020, and 1.8 billion by the year 2030.

UNWTO's long-term outlook *Tourism Towards 2030* shows that there is still a substantial potential for further tourism growth in coming decades

International arrivals in the EU are expected

to grow 2.3% a year until 2020 and 1.5%

International arrivals from markets outside the EU are expected to grow at a faster rate than from

a year until 2030

The strongest growth by region is expected to occur in Asia and the Pacific, where arrivals are forecast to increase by 337 million to reach 545 million in 2030 (+4.9% per year). The Middle East and Africa are forecast to more than double their number of arrivals this period, from 55 million to 135 million and from 50 million to 134 million respectively. In comparison, Europe (from 488 million to 762 million) and the Americas (from 150 million to 248 million) are projected to grow at a slower pace.

Thanks to their faster growth, the global market shares of Asia and the Pacific (to 30% in 2030, up from 22% in 2010), the Middle East (to 7% from 6%) and Africa (to 7% from 5%) will all increase. As a result, Europe (to 42% from 51%) and the Americas (to 14% from 16%) will experience a further decline in their shares of international tourism,

mainly because of the slower growth of the comparatively mature destinations in North America. Northern Europe and Western Europe.

### Growth projections for the European Union

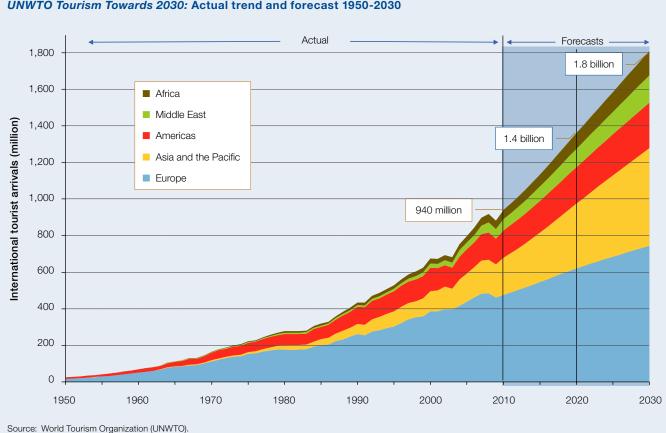

In the EU, growth in arrivals was projected at 1.9% a year for the period 2010-2030, compared with 2.3% recorded in 1995-2010. As in the world projection, growth in the EU is expected to decrease over time, from 2.3% a year in the period 2010-2020 to 1.5% a year in 2020-2030. However, as the base volume increases year after year, a lower growth rate still represents substantial growth in absolute terms. The projected rate of growth in the period 2010-2030 translates into an increase of some 9 million international tourist arrivals a year on average, compared with an average 7 million a year in the period 1995-2010.

The graph in the following page shows the projected trend for the EU from 2010 to 2030 (in blue) and the actual volume of arrivals recorded through 2016 (in red). International arrivals are expected to reach 562 million

in 2030, up from 383 million in 2010. Given the higher than expected growth rates of the past six years, so far arrivals have exceeded the long-term trend. As such, it is likely that the total projected arrivals for 2030 will also be higher. In 2016, a total of 500 million arrivals were recorded in the EU.

Emerging economy destinations are generally expected to grow faster than advanced economy destinations given their higher development potential. The seven emerging economy destinations in the EU were forecast to grow an average 4.0% a year through 2020, compared to 2.1% a year in the case of the 21 advanced economy destinations. Considering that two of those emerging economies are now categorised by the IMF as advanced economies (Latvia and Lithuania), the now five emerging economy destinations have grown an average of 7% a year between 2010 and 2016.

In the same period, the 23 advanced economy destinations have grown an average of 4% a year. This is a rather strong pace of growth for a group that includes many large and mature destinations. In the period 2020-

#### UNWTO Tourism Towards 2030: Actual trend and forecast 1950-2030

2030, emerging and advanced economy destinations are forecast to grow by 2.8% and 1.3% respectively.

In absolute terms, growth tends to be larger in advanced economies, as they usually grow from a much larger base. Advanced economy destinations in the EU are projected to see arrivals grow by 7 million a year on average, to reach 487 million in 2030. A total of 443 million arrivals were recorded in this group of destinations in 2016. Emerging economies are expected to see an increase of 2 million a year, to hit 75 million in 2030.

International arrivals have increased above the expectations of the projection, particularly in the EU, fuelled by stronger than expected intraregional demand and a robust economic recovery. Increasing air connectivity, more affordable travel and the rise of new tourism and information services through digital platforms have contributed to this remarkable growth. Weaker growth in North Africa and the Middle East has also partly redirected tourism flows to Europe, much of which to Southern and Mediterranean Europe.

EU, actual trend vs. Tourism Towards 2030 projection

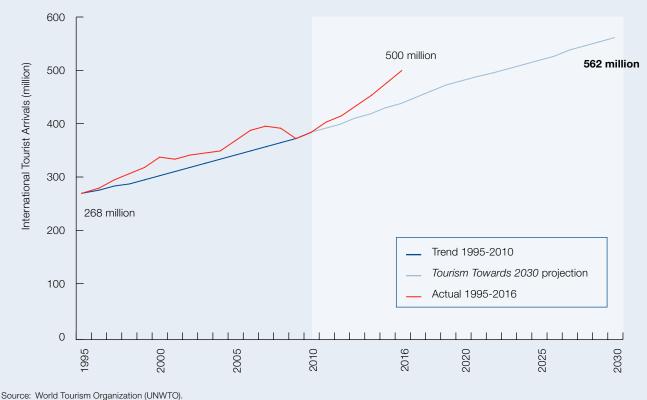

Although growth has been stronger than anticipated in many world destinations, global and regional projections for 2030 represent a useful reference for evaluating international tourism performance.

#### EU growth projections by region of origin

As in most world regions, the large majority of international arrivals in EU destinations originate from the same region. Of the 383 million arrivals recorded in 2010, 75% (288 mn) came from EU source markets, while another 11% (44 mn) originated in European source markets outside the EU (table 10.2). The remaining 52 million arrivals (13%) came from outside Europe, most of which from the Americas (7%, 27 mn) and Asia and the Pacific (5%, 18 mn), while Africa (4 mn) and the Middle East (3 mn) each accounted for some 1% of EU arrivals.

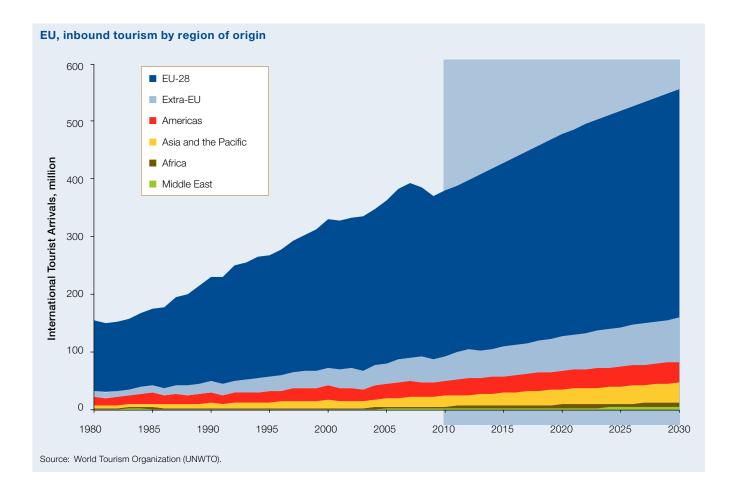

Arrivals in EU destinations from European source markets are expected to grow by 1.9% a year on average through 2030, of which from markets within the EU by 1.6% a year and from extra-EU by 3.5% a year. Interregional arrivals

# 600 500 million 500

are projected to grow by 2.4% a year, with the fastest growth expected to come from Africa (4.3% a year) though from a low base, followed by Asia and the Pacific (3.1% a year) and the Middle East (2.6% a year). The slowest growth is expected to come from the Americas (1.6% a year).

As result of the faster growth of arrivals from outside the EU, the share of arrivals in EU destinations from EU source markets intra intra-EU markets is expected to decrease slightly to 70% by 2030, while the share of extra-EU source markets in Europe will have increased to 13% and those from interregional source markets to 15%..

complied by World Tourism Organization (UNWTO) based on Eurostat. Classification by region of origin according to Eurostat. For Asia and the Pacific, Asia and Oceania are presented together as in UNWTO's grouping. Asia includes all countries of the Middle East and 8 of the countries the Common-wealth of Independent States unlike UNWTO. See further pages 124-127 of the Methodological manual for tourism statistics at http://ec.europa.eu/eurostat/en/web/products-manuals-and-guidelines/-/KS-GQ-13-007. Note:

Note: Classification by region of origin according to Eurostat. For Asia and the Pacific, Asia and Oceania are presented together as in UNWTO's grouping. Asia includes all countries of the Middle East and 8 of the countries the Common-wealth of Independent States unlike UNWTO. See further pages 124-127 of the Methodological manual for tourism statistics at http://ec.europa.eu/eurostat/en/web/products-manuals-and-guidelines/-/KS-GQ-13-007.

# Table 9.1 Key economic indicators for the tourism industries in EU, 2014

	Number of	Turnover	Value added at factor cost	Number of persons
	enterprises	(euro million)	(euro million)	employed
Total non-financial business economy <sup>1)</sup>	23,143,830	26,129,842	6,463,439	134,352,074
Total services <sup>2)</sup>	11,375,390	6,016,942	2,734,494	57,188,437
Total tourism industries <sup>3)</sup>	2,288,929	973,464	362,691	12,271,112
Tourism industries (mainly tourism)4)	358,865	446,164	131,933	3,194,215
Tourism industries (partially tourism) <sup>5)</sup>	1,930,064	527,299	230,758	9,076,897
Transport related (total)	362,603	253,416	88,509	1,903,510
Land transport	348,677	100,122	52,352	1,444,218
Passenger rail transport, interurban	266	42,718	20,402	306,710
Taxi operation	301,914	21,850	13,157	601,477
Other passenger land transport n.e.c.	46,497	35,554	18,793	536,031
Water transport	10,071	22,176	7,621	114,785
Sea and coastal passenger water transport	6,071	20,577	6,786	93,825
Inland passenger water transport	4,000	1,599	835	20,960
Passenger air transport	3,855	131,118	28,537	344,507
Accommodation (scope of Reg 692/2011)	281,851	161,709	77,093	2,423,930
Hotels and similar accommodation	151,951	135,285	65,284	2,046,553
Holiday and other short-stay accommodation	114,058	17,196	7,202	286,464
Camping grounds, recreational vehicle parks and trailer parks	15,842	9,229	4,607	90,913
Food and beverage (total)	1,490,342	321,922	127,413	7,251,563
Restaurants and mobile food service activities	915,685	236,866	95,676	5,168,352
Beverage serving activities	574,657	85,057	31,737	2,083,211
Car and other rental (total)	53,061	73,513	40,574	200,331
Renting and leasing of cars and trucks	39,554	71,334	39,705	173,699
Renting and leasing of recreational and sports goods	13,507	2,180	869	26,632
Travel agency, tour operator reservation service and related activities (total)	101,072	162,904	28,968	491,778
Travel agency and tour operator activities	73,159	153,338	26,303	425,778
Other reservation service and related activities	27,913	9,566	2,664	66,000

Note: Due to unreliable data at country level and rounding, deviations can occur between total and subtotals.

The **World Tourism Organization (UNWTO),** a United Nations specialized agency, is the leading international organization with the decisive and central role in promoting the development of responsible, sustainable and universally accessible tourism. It serves as a global forum for tourism policy issues and a practical source of tourism know-how. Its membership includes 158 countries, 6 territories, 2 permanent observers and over 500 Affiliate Members.

This project is co-funded by the European Union
